6.2 Saran

1. Diperlukan penelitian lanjutan dengan metode kasus Kontrol atau kohort prospektif untuk melihat derajat klinis stroke dan menentukan luaran klinis pasien dalam hal morbiditas.
2. Penelitian lebih lanjut untuk melihat faktor-faktor lain yang mempengaruhi nilai MPV terhadap derajat klinis stroke, antara lain
    - Terkontrol tidaknya faktor komorbid
    - Kadar C-reaktif protein

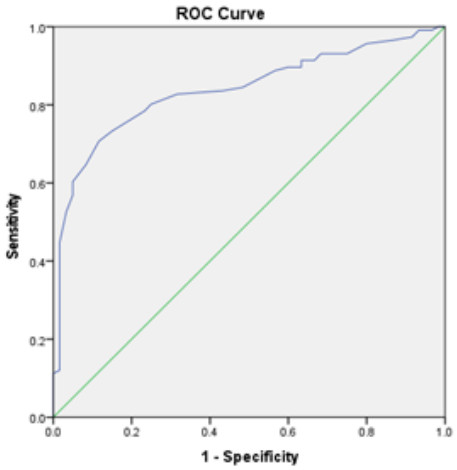
Larger values of the test result variable(s) indicate stronger evidence for a positive actual state.
a. The positive actual state is Sedang.



Diagonal segments are produced by ties.
