## **LAMPIRAN**

UNIVERSITAS HASANUDDIN  
PROGRAM STUDI MAGISTER TEKNIK SIPIL

Nama : Nasrul Rahman N

NIM : D012211011

LAMPIRAN

Tgl Percobaan : April 2022

Menimbang agregat yang akan digunakan untuk pembuatan mortar (Air, Semen, dan Pasir)

Timbangan

Mencampur material yang digunakan menggunakan alat mixer.

1. Campur air dan semen dan aduk selama  $\pm 30$  detik dengan kecepatan nomor 2.
2. Kemudian masukkan pasir dan aduk  $\pm 2$  menit dengan kecepatan nomor 2.
3. Setelah itu aduk manual untuk meratakan yang menempel di dinding wadah, dan dilanjutkan dengan mengaduk  $\pm 2$  menit dengan kecepatan nomor 3.

Mixer

NIM : D012211011

LAMPIRAN

Tgl Percobaan : April 2022

Menguji dan mengukur diameter mortar (*flow mortar*), dari hasil pengujian diameter flow mortar diperoleh diameter flow mortar 20 cm.

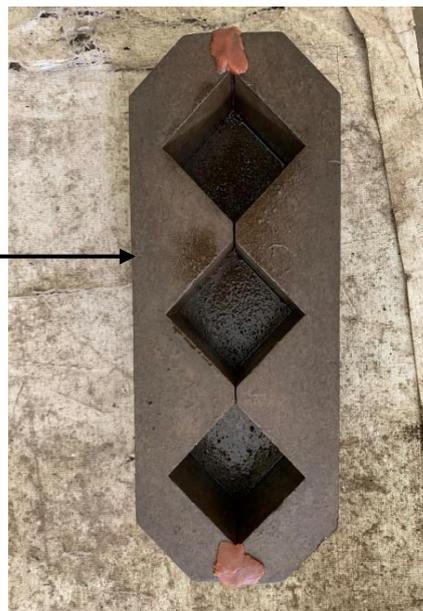

Alat yang digunakan :

1. Table Flow
2. Alat Ukur / Caliper

Table Flow

Menyiapkan cetakan mortar (silinder ukuran 5/10 cm, dan kubus 5/5 cm)

Cetakan Kubus

PROGRAM STUDI MAGISTER TEKNIK SIPIL**

Nama : Nasrul Rahman N

NIM : D012211011

**LAMPIRAN**

Tgl Percobaan : April 2022

Mencetak mortar dengan memasukkan mortar kedalam cetakan yang di bagi menjadi 2 lapis dimana setiap lapis di padatkan dengan 8 kali tumbukan. Dan mendinginkan mortar sampai mengeras  $\pm$  24 jam.

Setelah didiamkan  $\pm$  24 jam. Mortar dikeluarkan dari mould cetakan dan diperiksa kondisi mortar dalam kondisi baik tanpa ada yang pecah ataupun retak. Jumlah benda uji yang dibuat adalah 9 silinder 5/10 cm dan 29 kubus 5 cm x 5 cm x 5 cm.

LAMPIRAN

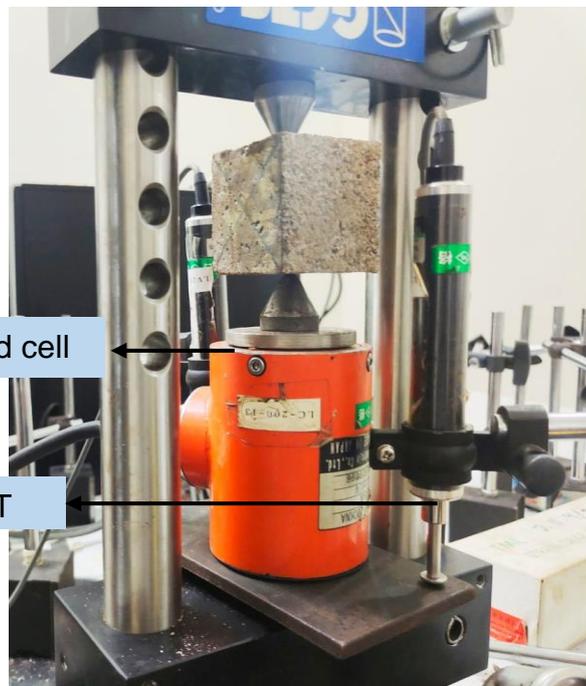

Tgl Percobaan : April 2022

Metode curing air adalah metode perawatan yang dilakukan pada mortar.

Curing Benda Uji

Pengujian point load menggunakan load cell untuk mengukur pembebanan, LVDT untuk mengukur regangan, dan data logger untuk mengakuisisi data.

Load cell

LVDT

<b>LAMPIRAN PERHITUNGAN NILAI BEBAN TITIK</b>		Tgl Percobaan : Jumat, 11 Maret 2022

### Contoh Perhitungan Beban Titik

Sampel 1 (Hari ke\_7) Fas 0,53

Diketahui :

$$P = 1.666 \text{ kN}$$

$$W = 50 \text{ mm}$$

$$D = 50 \text{ mm}$$

Ditanyakan :

Nilai  $I_s$  ?

Penyelesaian :

$$D_e = \sqrt{\frac{4 D W}{\pi}} = \sqrt{\frac{4 \cdot 50 \cdot 50}{\pi}} = 56.433 \text{ mm}$$

$$F = \sqrt{\frac{D_e}{50}} = \sqrt{\frac{56.4358}{50}} = 1.062$$

$$I_s = \frac{P}{D_e^2} = \frac{1666}{56.4358^2} = 0.52 \text{ MPa}$$

$$I_s (50) = F \cdot I_s = 1.062 \times 0.52 = 0.56 \text{ MPa}$$
