## LAMPIRAN

### Lampiran 1. Kuisisioner *Analytical Hierarchy Process* (AHP)

#### KUISIONER AHP MEMILIH BOBOT PARAMETER BAHAYA BANJIR DI DAS LATUPPA

##### Data Responden

Responden :  
Jabatan:  
Institusi :  
Tanggal :

##### Panduan Pengisian

Penentuan bobot untuk setiap kriteria (*criterion weighting*) dihitung dengan cara:

1. Menentukan nilai prioritas antara setiap kriteria dengan membandingkan yang mana lebih prioritas antara kriteria satu dengan kriteria lainnya.
2. Menentukan nilai bobot setiap kriteria dari skala tertinggi sampai terendah (9-1).
3. Urutan prioritas yang pertama (1) akan memiliki nilai bobot yang lebih tinggi dari yang lainnya. Sedangkan urutan prioritas selanjutnya dapat memiliki nilai bobot yang sama dengan urutan prioritas di atasnya. Misalnya prioritas 2 memiliki nilai bobot yang sama dengan prioritas 1, atau prioritas 3 memiliki nilai bobot yang sama dengan prioritas 2, dan seterusnya.
4. Makna setiap bobot tersebut dapat dilihat pada Tabel 1 dibawah ini:

Tabel 1. Makna nilai yang digunakan untuk menjawab kuesioner

| Tingkat Kepentingan | Definisi                                                                                                                                                                                                             |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Nilai 1             | Kedua faktor <b>sama pentingnya</b>                                                                                                                                                                                  |
| Nilai 3             | Faktor yang satu <b>sedikit lebih penting</b> daripada faktor yang lainnya                                                                                                                                           |
| Nilai 5             | Faktor satu esensial atau <b>lebih penting</b> daripada faktor lainnya                                                                                                                                               |
| Nilai 7             | Satu faktor <b>jelas lebih penting</b> daripada faktor lainnya                                                                                                                                                       |
| Nilai 9             | Satu faktor <b>mutlak lebih penting</b> daripada faktor lainnya                                                                                                                                                      |
| Nilai 2,4,6,8       | <b>Nilai-nilai antara</b> , diantara dua nilai pertimbangan yang berdekatan; Nilai 2 apabila ragu antara 1 & 3 Nilai 4 apabila ragu antara 3 & 5 Nilai 6 apabila ragu antara 5 & 7 Nilai 8 apabila ragu antara 7 & 8 |

Saaty (2008)

5. Berilah tanda  $\checkmark$  pada kotak bernomor (1-9) yang telah disediakan berdasarkan penilaian yang diberikan; misalnya anda menganggap bahwa faktor curah hujan lebih penting daripada faktor ketinggian dalam penentuan tingkat bahaya banjir, maka pengisian dilakukan pada kotak/kolom sesuai dengan ketentuan indikator penilaian diatas.

### LEMBAR PERTANYAAN

Menurut Bapak/Ibu/Saudara (i) dalam menentukan bobot parameter bahaya banjir di Daerah Aliran Sungai Latuppa, parameter manakah berikut yang paling penting?

| Parameter<br>Bahaya<br>Banjir | Lebih Penting |   |   |   |   |   |   |   |   | Lebih Penting |   |   |   |   |   |   |   |                               | Parameter<br>Bahaya<br>Banjir |
|-------------------------------|---------------|---|---|---|---|---|---|---|---|---------------|---|---|---|---|---|---|---|-------------------------------|-------------------------------|
|                               | 9             | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 2             | 3 | 4 | 5 | 6 | 7 | 8 | 9 |                               |                               |
| Kemiringan<br>Lereng          |               |   |   |   |   |   |   |   |   |               |   |   |   |   |   |   |   | Elevasi                       |                               |
