Pada pengukuran ini, Anda diminta untuk mengisi kuesioner yang bertujuan untuk mengukur beban kerja mental pekerjaan yang anda lakukan setiap hari. Hasil dari pengukuran ini adalah untuk menentukan apakah pekerjaan yang anda laksanakan memiliki beban kerja mental rendah (*underload*), optimal (*optimal load*), atau berlebihan (*overload*). Kuesioner ini terbagi menjadi dua tahap sebagai berikut :

- a) Pemberian bobot
 

Pada bagian ini anda diminta untuk memilih salah satu dari dua indikator yang dirasakan lebih dominan menimbulkan beban kerja mental terhadap pekerjaan tersebut. Kuesioner yang diberikan berupa perbandingan berpasangan.
- b) Pemberian peringkat
 

Pada bagian ini anda diminta memberi peringkat terhadap keenam indikator beban mental Rating yang diberikan adalah subjektif tergantung pada beban mental yang dirasakan oleh responden selama pekerjaan. Pada masing-masing faktor terdapat skala 0-100 atau rendah sampai dengan tinggi

| Skala                 | Keterangan   |
|-----------------------|--|
| Kebutuhan Mental (KM) | Seberapa sering pekerjaan Anda melibatkan kerja otak seperti mengambil keputusan, berpikir, mengingat, menghitung, dan lain-lain             |
| Kebutuhan Fisik (KF)  | Seberapa sering pekerjaan Anda melibatkan kerja otot, seperti mengendarai kendaraan, berjalan, dan lain-lain                                 |
| Kebutuhan Waktu (KW)  | Seberapa besar tekanan yang Anda rasakan mengenai waktu dalam penyelesaian pekerjaan   |
| Performa (P)          | Seberapa besar keberhasilan yang Anda capai dan seberapa puas yang Anda rasakan mengenai keberhasilan Anda                                   |
| Tingkat Usaha (TU)    | Seberapa besar usaha yang Anda keluarkan secara mental dan fisik yang dibutuhkan untuk menyelesaikan pekerjaan Anda                          |
| Tingkat Frustasi (TF) | Seberapa besar rasa tidak aman, putus asa, tersinggung, stres dan tidak memotivasi, ataukah sebaliknya, menyenangkan, santai, dan memuaskan. |
