| Linear-by-Linear Association | 2.398               | 1  | .121                  |
| N of Valid Cases             | 36                  |    |                       |

a. 48 cells (100.0%) have expected count less than 5. The minimum expected count is .17.

### **Uji Hipotesa**

$H_0$  : Tidak terdapat perbedaan yang signifikan skor histopatologi lambung setelah pemberian perlakuan

$H_a$  : Terdapat perbedaan yang signifikan skor histopatologi lambung setelah pemberian perlakuan

$\chi^2$  hitung : 70,286

Derajat Bebas :  $(12-1) (4-1) = 33$

$\chi^2$  tabel (0,05) : 47,399

$\chi^2$  tabel (0,01) : 54,775

$\chi^2$  hitung >  $\chi^2$  tabel → Signifikan;  $H_a$  diterima,  $H_0$  ditolak.

### **Kesimpulan**

Terdapat perbedaan yang signifikan skor histopatologi lambung setelah pemberian perlakuan

### **LAMPIRAN III**

#### **KANDUNGAN ANTOSIANIN EKSTRAK BERAS KETAN HITAM**

**Tabel 4.** Kandungan Antosianin Ekstrak Beras Ketan Hitam

| <b>Jenis Ekstrak</b> | <b>Kadar (% b/b)</b> |
|----------------------|----------------------|
| Ekstrak metanol      | 0,166                |
| Ekstrak etanol       | 0,126                |
| Ekstrak aseton       | 0,077                |

**LAMPIRAN IV**  
**PERHITUNGAN DOSIS**

**A. Aspirin**

1) Konversi dosis aspirin untuk tikus

$$\begin{aligned} - \text{ Dosis toksik manusia} &= 3500 \text{ mg} \\ - \text{ Faktor konversi untuk tikus} &= 0,018 \\ &\text{dengan bobot } 200 \text{ g} \\ - \text{ Dosis konversi untuk tikus } 200 \text{ g} &= 3500 \text{ mg} \times 0,018 \\ &= 63 \text{ mg}/200 \text{ g BB tikus} \\ &= \sim 60 \text{ mg}/200 \text{ g BB tikus} \end{aligned}$$

Dosis toksik aspirin 60 mg/200 g BB setara dengan 300 mg/kg BB tikus

2) Penyiapan sediaan suspensi aspirin

$$\begin{aligned} - \text{ Volume pemberian tikus putih} &= 3 \text{ ml} \\ - \text{ Konversi sediaan aspirin} &= 60 \text{ mg}/3 \text{ ml} \\ - \text{ Sediaan stok} &= 250 \text{ ml} \\ - \text{ Jumlah aspirin yang ditimbang} &= \frac{60 \text{ mg} \times 250 \text{ ml}}{3 \text{ ml}} \\ &= 5 \text{ g} \end{aligned}$$

3) Perhitungan aspirin setara 5 g

$$\begin{aligned} - \text{ Aspirin yang tersedia} &= \text{tablet @ } 500 \text{ mg} \\ - \text{ Berat rata-rata} &= 598 \text{ mg} \\ - \text{ Berat tablet yang ditimbang} &= \frac{5.000 \text{ mg} \times 598 \text{ mg}}{500 \text{ mg}} \\ &= 5,98 \text{ g} \end{aligned}$$

## B. Ranitidin (34)

### 1. Konversi dosis ranitidin untuk tikus

- Dosis lazim untuk manusia = 300 - 600 mg
- Faktor konversi untuk tikus = 0,018  
dengan bobot 200 g
- Dosis konversi untuk tikus 200 g =  $600 \text{ mg} \times 0,018$   
=  $10,8 \text{ mg}/200 \text{ g BB tikus}$   
=  $\sim 10 \text{ mg}/200 \text{ g BB tikus}$

Dosis ranitidin 10 mg/200 g BB tikus setara dengan 50 mg/kg BB tikus

### 2. Penyiapan sediaan suspensi ranitidin

- Volume pemberian tikus putih = 3 ml
- Konversi sediaan ranitidin =  $10 \text{ mg}/3 \text{ ml}$
- Sediaan stok = 25 ml
- Jumlah ranitidin yang ditimbang =  $\frac{10 \text{ mg} \times 25 \text{ ml}}{3 \text{ ml}}$   
= 83,33 mg

### 3. Perhitungan ranitidin setara 83,33 mg

- Ranitidin yang tersedia = tablet @ 150 mg
- Berat rata-rata = 330,8 mg
- Berat tablet yang ditimbang =  $\frac{83,33 \text{ mg} \times 330,8 \text{ mg}}{150 \text{ mg}}$   
= 183,7 mg

## C. Ekstrak Beras Ketan Hitam

### 1) Penentuan dosis ekstrak beras ketan hitam untuk tikus

- Kadar antosianin total di dalam = 0,166 %

ekstrak beras ketan hitam

- Dosis gastroprotektif antosianin = 5 mg, 25 mg atau 50 mg/kg BB tikus
  
- Sehingga kisaran dosis oral =  $\frac{5 \text{ mg/kg}}{0,166}$  sampai  $\frac{25 \text{ mg/kg}}{0,166}$   
 ekstrak beras ketan hitam untuk  
 mencapai antosianin 5-25 mg/kg BB  
 $= 30 - 150 \text{ mg/kg BB tikus}$   
 $= 6 - 30 \text{ mg/200 g BB tikus}$

Dari rentang dosis tersebut, digunakan tiga dosis yaitu: 7,5 mg/200 g BB (37,5 mg/kg BB); 15 mg/200 g BB (75 mg/kg BB) dan 30 mg/200 g BB (150 mg/kg BB).

## 2) Penyiapan suspensi ekstrak etanol beras ketan hitam

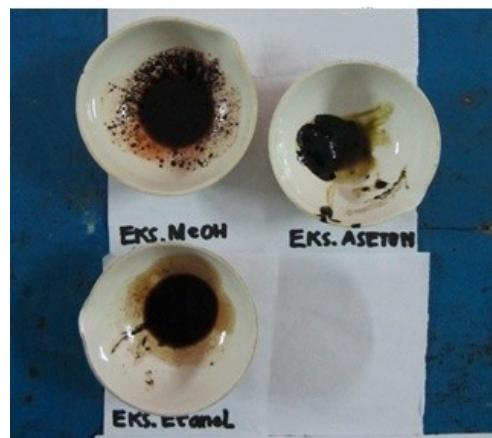

- Volume pemberian tikus putih = 3 ml
- Konversi suspensi ekstrak =  $30 \text{ mg}/3 \text{ ml}$
- Sediaan stok = 50 ml
- Jumlah ekstrak yang ditimbang =  $\frac{30 \text{ mg} \times 50 \text{ ml}}{3 \text{ ml}}$   
 $= 500 \text{ mg}$

Dilakukan perhitungan yang sama untuk ekstrak metanol dan aseton.

**LAMPIRAN V**  
**GAMBAR PENELITIAN**

**Gambar 9.** Beras ketan hitam

**Gambar 10.** Ekstrak beras ketan hitam

**Gambar 11.** Pemberian secara oral
