ABSTRACT

The study was conducted for 2 months ie in May-July 2009 in the village of Tongke-Tongke, East Sinjai District, District Sinjai, Sulawesi used Selatan. Metode research is survey method. This research is done by using a descriptive approach to assess the situation approaches the object or the problems that exist. Sampling methods using Random Sampling Technique (simple random), and sampling 10% of the population of 700 families of the 70 respondents.

The data collected is of primary data is data obtained through direct field observations and interviews with key informants and community (key informants) who knows the location of the general conditions, including conditions that the people residing near the mangrove forests while the secondary data is data obtained from intansi government (Department of Marine and Fisheries Sinjai regency , Office of Regional Development Planning Agency Sinjai regency, and the Office of the Village Tongke-Tongke, literature and the results of existing research.

Based on the results of research that links the three stakeholders namely government, ACI and the community well enough but still needs to be improved so that conflict can be resolved as soon as possible occur. Regarding the public perception, the public considered that the role of ACI on mangrove konservasi good enough, although there are some respondents who did not acknowledge the role of ACI. This is proved by using a Likert scale.
