The 2nd International Conference on Environmental Risks and Public Health (ICER-PH)
10–12 April 2015

Global Environmental Changes and the Human Health Impact

Department of Environmental Health, Faculty of Public Health Hasanuddin University, Makassar
Indonesia, 2015
Good Morning Ladies and Gentlemen

It's my pleasure to welcome the participants from different cities and countries came to this Opening of the International Conference. We will be here to exchange experience and work together a few days on the exciting field of Environmental Risks and Public Health (ICER-PH2015).

This is the second of a new series of annual academic conferences exploring how Environmental can effect Human health could be utilized in teaching, learning, and educational Process. For many years, the Faculty of Public health has been organizing conferences in a the area of public health and environmental risks with some co organizer such as Persakmi, Ganea and some industries that have a similar program.

I am delighted to see that many institutions have again organized a new series of annual conferences that capitalize on our strengths and have built on our common commitment to promoting effective use model and method of calculating the environmental risks and the potential impact to human. At this conference adopt a timely theme “Global environmental Changes and the Human Health Impact.

If we take a look at the ICER-PH Conference Programe, we will find that this Conference is going to be busy and productive. There is a lot to offer for a two days event, and at the third day we offer a city tour for Makassar city and Maros City. I would like to take this opportunity to thank the ICER-PH 2015 Conference Organizing Committee for their smart and diligent work. I would also like to thank participants, especially those of you coming from abroad and from other provinces, for joining us and sharing your valuable experience and ideas. It is essential to bring together experts in the field of technology in education so that we can realize together the potential of model environmental risk and Effect to the human health education.

In closing, I hope that all of you will enjoy the Conference, and I wish our visitors from abroad and different provinces will have a very pleasant stay in our Makassar city.

Thank you.

Smoking behavior in any place could produces smoke which is bad for health. To overcome this, the government of Makassar was implemented of non-smoking area. This study aims to determine smoking behavior of the employee after the application of non-smoking area in the mayor's office of Makassar. This research is a qualitative research with phenomenology design. Snowballing method used to determine the eighteen informants. Data was collected through in-depth interviews, observation and document review. Data validation was done by triangulation methods and member check. Data were analyzed by using content analysis. The results showed that the informants have had intention to change smoking behavior prior to the application of non-smoking area. After application of the non-smoking area precisely they did not felt the influence on intentions. Social support was obtained informants in the form of support information sourced from family, friends and superiors. Informants felt the ease of reaching and facilities on non-smoking area. Two informants have behavioral changes related to personal autonomy. Situations that allow such a situation of attachment signs were prohibited from smoking. Employee smoking behavior was determined by autonomy allowing employees to change the behavior of smoking. Thus it is suggested media special unit of officers and managers of non-smoking area to stimulate the behavior of employee smoking behavior and attach sanctions to be given to offenses on the spot-a strategic place. The results of this study in the form of policy briefs to the policy makers in the study area for consideration in changing smoking behavior, employee, non-smoking area
