LAMPIRAN

FOTO-FOTO PROSES PENELITIAN

Gambar 9 Sisik bandeng diperoleh dari ikan bandeng (*Chanos-chanos*) yang berasal dari Kabupaten Pangkep, Sulawesi Selatan Sisik ikan bandeng kemudian dibersihkan menggunakan air mengalir. Berat total sisik ikan yang diperoleh sebanyak 533 gram. (19 April 2021)

Gambar 10 Sisik ikan bandeng dibungkus dalam aluminium foil untuk pengeringan merata, dikeringkan dalam oven pada suhu 50-550C selama tujuh hari, lalu dihaluskan

dengan blender dan diayak. Diperoleh serbuk sisik ikan sebanyak 59 gram. (19 April 2021)

Gambar 11 Proses deproteinase dilakukan dengan pengadukan larutan NaOH 3,5 N pada suhu 900C derajat selama 1 jam pada 50 rpm, kemudian disaring. Padatan yang diperoleh dibilas dengan akuades dan dikeringkan pada oven dengan suhu 70oC selama 24 jam (20 Mei 2021). Selanjutnya dilakukan demineralisasi untuk memperoleh kitin

Gambar 12 Proses deasetilasi dilakukan dengan merendam kitin dalam larutan NaOH 40% dengan suhu 90oC selama 1,5 jam hingga diperoleh kitosan yang berwarna putih dan tidak berbau menyengat (22 Mei 2021). Uji derajat deasetilasi menunjukkan kitosan dengan derajat deasetilasi 96% (24 Mei 2021). Serbuk kitosan kemudian dicampurkan dengan gliserin, akuades, dan metil parabean untuk menghasilkan gel kitosan (7 Juni 2021)

Gambar 13 Setelah marmut diadaptasikan selama 7 hari (20 Mei 2021), marmut dibagi menjadi 4 kelompok yaitu kelompok 1 (soket diisi dengan kitosan sisik ikan bandeng), kelompok 2 (soket gigi diisi xenograft/ kontrol positif), kelompok 3 (soket gigi diisi dengan kombinasi kitosan dan xenograft), dan kelompok 4 (soket gigi diisi dengan gel placebo/ kontrol negatif). Gigi insisivus kanan mandibula dicabut menggunakan needle holder. Soket diirigasi dengan larutan saline. Prosedur socket preservation dilakukan sesuai dengan kelompok perlakuan masing-masing (14 Juni 2021).

Gambar 14 Setelah pencabutan gigi insisivus rahang bawah dan diberi perlakuan, marmut dikorbankan pada hari ke 3 (18 Juni 2021), 7 (21 Juni 2021), 14 (28 Juni 2021), dan 28 (12 Juli 2021) untuk pengambilan jaringan pada rahang mandibula dan difiksasi menggunakan larutan buffer formalin 10% sebagai sampel penelitian
