Lampiran 4. Data Absorbansi Kurva Kalibrasi Deret Larutan Standar

Tabel 1. Hasil pengukuran deret larutan standar Krom(VI)

Konsentrasi (mg/L)	Absorbansi
0	0,006
0,2	0,149
0,4	0,308
0,6	0,459
0,8	0,609
1	0,77

Dari kurva kalibrasi deret larutan standar diperoleh persamaan garis lurus
 $y = 0,6184x + 0,0143$.

Lampiran 5. Data Penentuan pH Optimum

Berdasarkan persamaan garis pada kurva kalibrasi deret larutan standar Krom(VI), maka nilai konsentrasi akhir (C_{akhir}) dapat dihitung. Pada pH 8 diperoleh absorbansi sebesar 0,4055 dengan faktor pengenceran sebesar 100 kali.

Diketahui:

$$C_{awal} = 100 \text{ mg/L}$$

$$y = ax + b$$

$$y = 0,6184x + 0,0143$$

$$0,4055 = 0,6184x + 0,0143$$

$$0,4055 - 0,0143 = 0,6184x$$

$$x = 0,6326$$

$$C = 0,6326$$

$$\begin{aligned} \text{Kadar Cr (mg/L)} &= C \times fp \\ &= 0,6326 \times 100 \\ &= 63,26 \end{aligned}$$

Rumus perhitungan persen penurunan ion Krom(VI) :

$$\begin{aligned} \% \text{ Penurunan} &= \frac{C_{awal} - C_{akhir}}{C_{awal}} \times 100\% \\ &= \frac{100 - 63,26}{100} \times 100\% \\ &= 36,74\% \end{aligned}$$

Lampiran 6 Data Penentuan Waktu Kontak Optimum

Berdasarkan persamaan garis pada kurva kalibrasi deret larutan standar Krom(VI), maka nilai konsentrasi akhir (C_{akhir}) dapat dihitung. Pada waktu kontak selama 5 menit diperoleh absorbansi sebesar 0,4055 dengan faktor pengenceran sebesar 100 kali.

Diketahui:

$$C_{awal} = 100 \text{ mg/L}$$

$$y = ax + b$$

$$y = 0,6184x + 0,0143$$

$$0,4055 = 0,6184x + 0,0143$$

$$0,4055 - 0,0143 = 0,6184x$$

$$x = 0,6326$$

$$C = 0,6326$$

$$\text{Kadar Cr (mg/L)} = C \times fp$$

$$= 0,6326 \times 100$$

$$= 63,26$$

Rumus perhitungan persen penurunan ion Krom(VI) :

$$\begin{aligned}\% \text{ Penurunan} &= \frac{C_{awal} - C_{akhir}}{C_{awal}} \times 100\% \\ &= \frac{100 - 63,26}{100} \times 100\% \\ &= 36,74\%\end{aligned}$$
