SURAT PERSETUJUAN ETIK PENELITIAN

KEMENTERIAN PENDIDIKAN, KEBUDAYAAN
RISET, DAN TEKNOLOGI
UNIVERSITAS HASANUDDIN
FAKULTAS KESEHATAN MASYARAKAT
Jln. Perintis Kemerdekaan Km.10 Makassar 90245, Telp.(0411) 585658,
E-mail : fkm.unhas@gmail.com, website: <https://fkm.unhas.ac.id/>

REKOMENDASI PERSETUJUAN ETIK

Nomor : 4892/UN4.14.1/TP.01.02/2022

Tanggal : 13 Mei 2022

Dengan ini Menyatakan bahwa Protokol dan Dokumen yang Berhubungan dengan Protokol berikut ini telah mendapatkan Persetujuan Etik :

| | | | |
|-----------------------------------|--|---|---------------------------|
| No. Protokol | 25422092085 | No. Sponsor Protokol | |
| Peneliti Utama | Nurmupida Abbas | Sponsor | Pribadi |
| Judul Peneliti | Pengaruh Teh Lidah Buaya Terhadap Penanganan Hiperglikemia Dan Keamanan Pertumbuhan Fetus Pada Mencit Bunting | | |
| No. Versi Protokol | 1 | Tanggal Versi | 25 April 2022 |
| No. Versi PSP | 1 | Tanggal Versi | 25 April 2022 |
| Tempat Penelitian | 1. Laboratorium fitokimia FMIPA UNHAS 2. Laboratorium Biofarmasi Fak.Farmasi UNHAS | | |
| Judul Review | <input type="checkbox"/> Exempted <input checked="" type="checkbox"/> Expedited <input type="checkbox"/> Fullboard | Masa Berlaku 13 Mei 2022 Sampai 13 Mei 2023 | Frekuensi review lanjutan |
| Ketua Komisi Etik Penelitian | Nama : Prof.dr. Veni Hadju, M.Sc, Ph.D | Tanda tangan | Tanggal |
| Sekretaris komisi Etik Penelitian | Nama : Dr. Wahiduddin, SKM., M.Kes | Tanda tangan | Tanggal |

Kewajiban Peneliti Utama :

1. Menyerahkan Amandemen Protokol untuk persetujuan sebelum di implementasikan
2. Menyerahkan Laporan SAE ke Komisi Etik dalam 24 Jam dan dilengkapi dalam 7 hari dan Laporan SUSAR dalam 72 Jam setelah Peneliti Utama menerima laporan
3. Menyerahkan Laporan Kemajuan (progress report) setiap 6 bulan untuk penelitian resiko tinggi dan setiap setahun untuk penelitian resiko rendah
4. Menyerahkan laporan akhir setelah Penelitian berakhir
5. Melaporakn penyimpangan dari protocol yang disetujui (protocol deviation/violation)
6. Mematuhi semua peraturan yang ditentukan

LAMPIRAN 2

SURAT PERMOHONAN IZIN PENELITIAN

KEMENTERIAN PENDIDIKAN, KEBUDAYAAN,
RISET DAN TEKNOLOGI
UNIVERSITAS HASANUDDIN
SEKOLAH PASCASARJANA

Jalan Perintis Kemerdekaan km. 10 Makassar 90245 Telp.: (0411) 585034, 585036
Fax.: (0411) 585868, E-mail: info@pasca.unhas.ac.id, <http://pasca.unhas.ac.id>

Nomor : 1700 /UN4.20.1/PT.01.04/2022 06 Juni 2022
Perihal : Permohonan Izin Penelitian

Yth. Dekan Fakultas Kedokteran Universitas Hasanuddin
Makassar

Dengan hormat disampaikan bahwa mahasiswa Sekolah Pascasarjana Universitas Hasanuddin yang tersebut dibawah ini :

Nama : Nurmupida Abbas
Nomor Pokok : P102202055
Program Pendidikan : Magister (S2)
Program Studi : Ilmu Kebidanan

Bermaksud melakukan penelitian dalam rangka persiapan penulisan tesis terkait dengan judul "Pengaruh Teh Lidah Buaya Terhadap Penanganan Hiperglikemia dan Keamanan Pertumbuhan Fetus Pada Mencit Bunting".

Sehubungan dengan hal tersebut, mohon kiranya yang bersangkutan diberikan izin untuk melakukan penelitian di Laboratorium Animal yang ada di Fakultas Kedokteran Unhas.

Atas perkenan dan kerjasamanya diucapkan terima kasih.

Kan. Dekan
Wakil Dekan Bidang Akademik, Riset
dan Inovasi
Universitas Hasanuddin
Makassar
Herman Parung, M.Eng.
NIP. 19620629 198703 1 001

- Tembusan Yth:
1. Dekan SPs Unhas "sebagai laporan"
 2. Ketua Laboratorium Animal Fak. Kedokteran Unhas;
 3. Mahasiswa yang bersangkutan;
 4. Arsip

LAMPIRAN 4

**STANDAR OPERATIONAL PROSEDUR
(UJI BAHAN SEBAGAI PENANGANAN HIPERGLIKEMIA PADA
MENCIT BUNTING)**

| NO. | Hari ke | LANGKAH PELAKSANAAN |
|-----|------------------------------|---|
| | A | PROSES AKLIMATISASI (ADAPTASI) DAN KOPULASI |
| 1 | | <p>Mengamati masa estrus pada mencit betina. Bila mencit betina dalam masa estrus proses kopulasi siap dilakukan. Fase estrus mencit dapat ditentukan dengan melihat ciri organ genitalia eksternanya, yaitu vulva yang membengkak dan berwarna kemerahan. Fase estrus juga dapat diketahui dengan pembuatan apusan vagina:</p> <ol style="list-style-type: none"> 1. Basahi cotton bud dengan NaCL 0,9% 2. Usapkan cotton bud pada vagina mencit 3. Oleskan cotton bud pada gelas obyek 4. Teteskan Metylen blue 1% dan dibiarkan kering (3-5 menit) 5. Amati apusan vagina dengan bantuan mikroskop 6. Penentuan tahap siklus reproduksi melalui gambar apusan vagina berikut: <div style="text-align: center;">  <p style="display: flex; justify-content: space-around; font-size: small;"> Estrus Metestrus Diestrus Proestrus </p>  </div> |
| 2 | | <p>Masukkan mencit betina yang dalam masa estrus bersama mencit jantan dalam kandang bak perkawinan pada sore hari (16.00-18.00 wib) agar terjadi perkawinan (1 bak perkawinan terdiri dari 5 mencit betina dan 2 mencit jantan)</p> |
| 3 | 0-7 (kebuntingan) | <p>Setelah 24 jam dari saat dikawinkan, diamati adanya sumbat vagina (<i>copulatory plug</i>), yaitu sumbat kekuningan pada vagina atau sisa sperma dalam vagina untuk memastikan mencit betina sudah dalam keadaan bunting. Maka mencit dinyatakan telah melakukan kopulasi dan saat itu ditentukan sebagai hari ke-0 kebuntingan.</p> <div style="text-align: center;">  <p style="display: flex; justify-content: space-around; font-size: small;"> Vagina dalam masa Proestrus Vagina dengan <i>copulatory plug</i> </p> </div> |

| | | |
|----------|------------------------|--|
| 4 | 8 (kebuntingan) | Membagi mencit secara acak dalam 4 kelompok (masing-masing 6 ekor) dan memberi tanda pada kandang setiap kelompok, dengan simbol berikut: Kelompok 1= K1 Kelompok 2= K2 Kelompok 3= K3 Kelompok 4= K4 |
| 5 | | Memberi kode pada badan mencit menggunakan spidol dengan simbol berikut: K1: 1A – 1B – 1C – 1D – 1E – 1F K2: 2A – 2B – 2C – 2D – 2E – 2F K3: 3A – 3B – 3C – 3D – 3E – 3F K4: 4A – 4B – 4C – 4D – 4E – 4F |
| B | | PROSES PENYUNTIKAN ALOKSAN PADA MENCIT BUNTING |
| 6 | 9 (kebuntingan) | Semua mencit betina di puasakan selama 8 jam. Lakukan pemeriksaan kadar glukosa darah pertama. Suntikkan aloksan dengan dosis 0,3 ml untuk mencit 20 g secara intraperitoneal sebanyak 1 (satu) kali saja menggunakan spuit. |
| C | | PEMERIKSAAN KADAR GLUKOSA DARAH KEDUA (PRE TEST) |
| 7 | 11 (kebuntingan) | Mencit bunting dipuasakan kembali selama 8 jam dan melakukan kembali pemeriksaan kadar glukosa darah: <ul style="list-style-type: none"> • Kategori kadar glukosa darah tinggi/hiperglikemia (mg/dl) pada mencit, yaitu sebagai berikut: <ul style="list-style-type: none"> - Normal : 62,8 mg/dl - 176 mg/dl - Hiperglikemia : >200 mg/dl • Setelah mencit mencapai kadar glukosa darah tinggi/hiperglikemia. Maka setiap kelompok mencit diberikan intervensi yaitu bahan uji dan bahan kontrol |
| D | | PROSES INTERVENSI BAHAN UJI DAN PEMBANDING |
| 8 | 11-17 (kebuntingan) | Siapkan: <ul style="list-style-type: none"> • Larutan Metformin • Teh lidah buaya |
| 9 | | Setelah mencit mengalami hiperglikemia, berikan bahan uji dan bahan kontrol/pembanding pada tiap-tiap ekor mencit sesuai kelompok: <ul style="list-style-type: none"> • K1: diberi Metformin suspensi 0.2 ml/ekor/hari • K2: diberi teh lidah buaya 0,1 gr/ekor/hari • K3: diberi teh lidah buaya 0,2 gr/ekor/hari • K4: diberi teh lidah buaya 0,4 gr/ekor/hari Intervensi diberikan sesuai dosis perkelompok sebanyak 1 kali/hari selama 7 hari yaitu pada hari ke-11 sampai 17 kebuntingan. Cairan obat diberikan dengan menggunakan sonde oral. Sonde oral ditempelkan pada langit-langit mulut atas mencit, kemudian perlahan-lahan dimasukkan sampai ke esofagus dan cairan obat dimasukkan. |

| E | | TAHAP EVALUASI PASCA INTERVENSI (POST TEST) |
|-----------|-----------------------------|---|
| 10 | 18 (kebuntingan) | <p>PENGAMATAN KADAR GULA DARAH Setelah pemberian intervensi selama 7 hari, mencit betina kembali dipuaskan selama 8 jam dan dilakukan kembali pemeriksaan kadar glukosa darah yang ketiga</p> |
| 11 | | <p>PENGAMATAN PERTUMBUHAN FETUS Kebuntingan mencit dihentikan dengan cara dislokasi leher, kemudian dilakukan laparotomi untuk mengeluarkan fetus dengan membedah bagian abdomen ke arah atas sampai terlihat uterus yang berisi fetus. Fetus dan plasenta dikeluarkan dengan memotong uterus.</p> |
| 12 | | <p>Menilai:</p> <ul style="list-style-type: none"> • Jumlah fetus: Hitung seluruh jumlah fetus hidup, fetus mati dan fetus resorpsi pada setiap ekor mencit. Diinterpretasikan dalam angka. <ul style="list-style-type: none"> - Fetus hidup (berkembang penuh dan merespon sentuhan) - Fetus mati (berkembang penuh tetapi tidak merespon sentuhan) - Fetus resorpsi (fetus abnormal dengan bentuk gumpalan) • Bobot fetus: Fetus dikeringkan dengan kertas tissue, ditimbang berat badan setiap fetus dan mengukur panjang badan (kertas millimeter/ penggaris) • Kelainan morfologi: Gunakan kaca pembesar untuk melihat bentuk ekor, daun telinga, jumlah dan keadaan jari tungkai depan dan belakang dan kondisi badan |
