LAMPIRAN

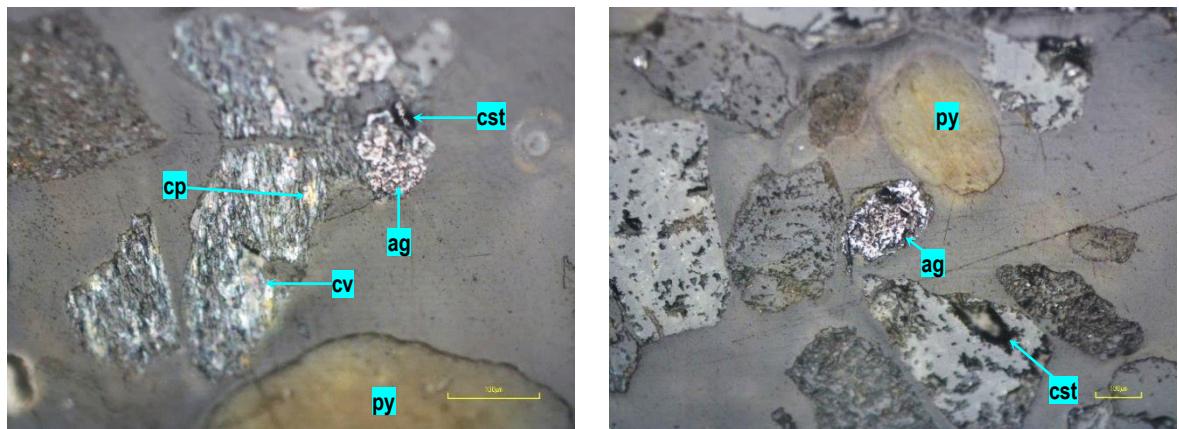

Lampiran 1 Stasiun Pengambil Sampel Plaser

Lampiran 2 Deskripsi Mineragrafi

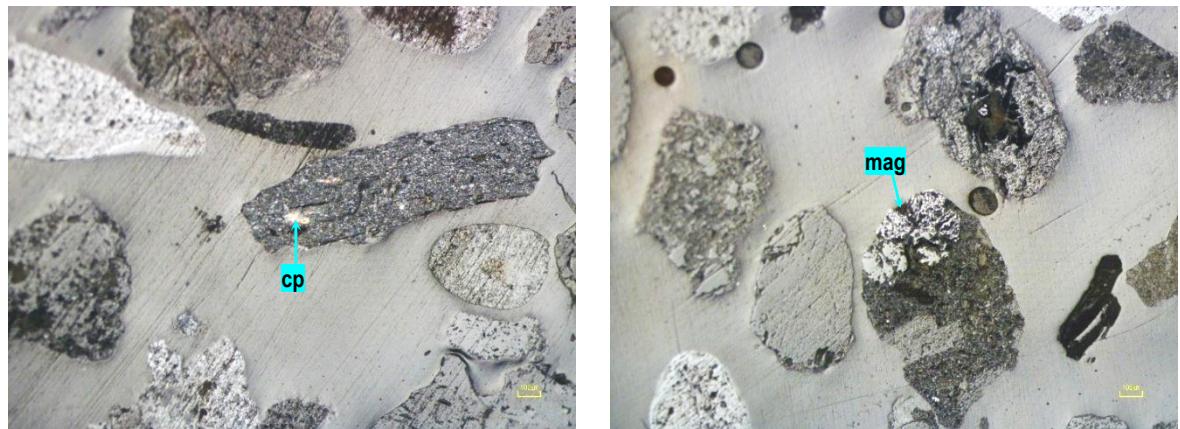

No Sampel : 1
 Koordinat :
 Mineral Bijih : Cassiterite, silver, chalcopyrite, pyrite, dan covellite
 Referensi : Marshall et al. (2004)

| Komposisi Mineral | Simbol | Deskripsi Mineralogi |
|-------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------|
| Cassiterite | cst | Warna abu-abu kehitaman, bentuk anhedral, anisotropik, tidak memiliki pleokroisme, ukuran mineral 0,1-0,5 mm. |
| Silver | ag | Warna putih cerah, bentuk subhedral-anhedral, isotropik, tidak memiliki pleokroisme, ukuran mineral <0,3 mm. |
| Chalcopyrite | cp | Warna kuning cerah, bentuk anhedral, anisotropik, tidak ada pleokroisme, ukuran mineral 0,05 mm. |
| Pyrite | py | Warna putih kekuningan, bentuk subhedral-anhedral, terdapat striasi, anisotropik, tidak memiliki pleokroisme, ukuran mineral 0,1 - 0,3 mm. |
| Covellite | cv | Warna biru, bentuk anhedral, tidak memiliki pleokroisme, ukuran mineral 0,005 mm. |

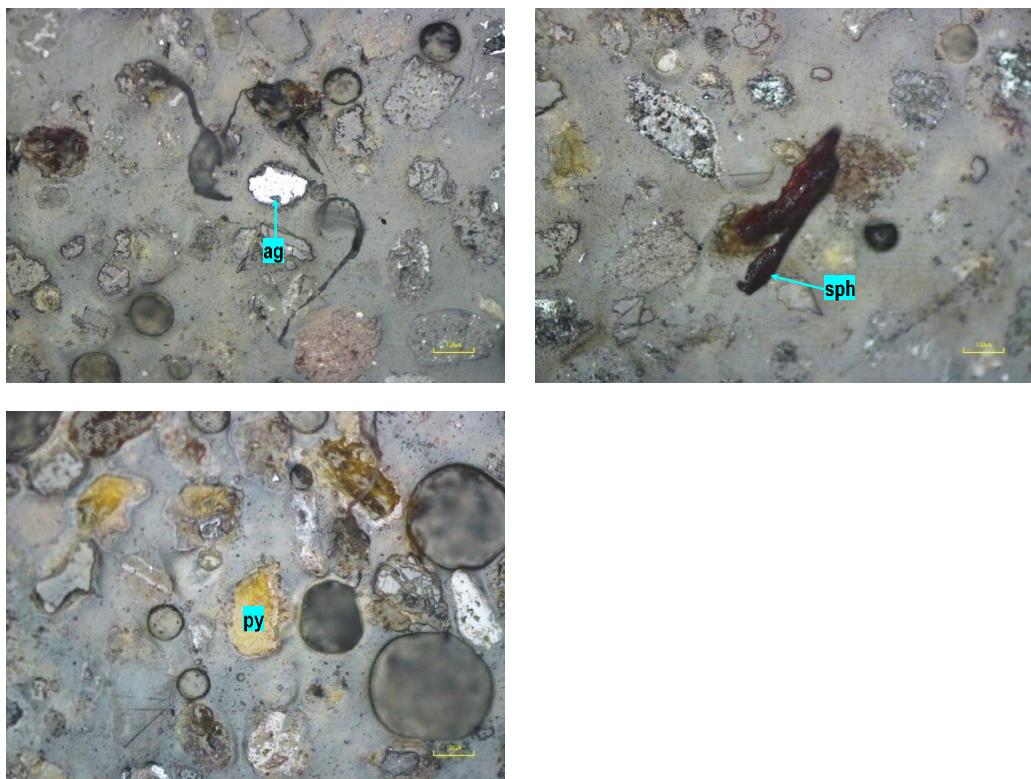

No Sampel : 2
Koordinat :
Mineral Bijih : *Pyrite, chalcopyrite dan magnetite*
Referensi : Marshall et al. (2004)

| Komposisi Mineral | Simbol | Deskripsi Mineralogi |
|--------------------------|---------------|--------------------------------------------------------------------------------------------------------------------------|
| <i>Pyrite</i> | py | Warna putih kekuningan, bentuk subhedral-anhedral, anisotropik, tidak memiliki pleokroisme, ukuran mineral 0,1 - 0,3 mm. |
| <i>Chalcopyrite</i> | cp | Warna kuning cerah, bentuk anhedral, anisotropik, tidak ada pleokroisme, ukuran mineral 0,05 mm. |
| <i>Magnetite</i> | mag | Warna abu-abu kehitaman, bentuk euhedral-subhedral, isotropik, tidak ada pleokroisme, ukuran mineral <0,25 mm. |

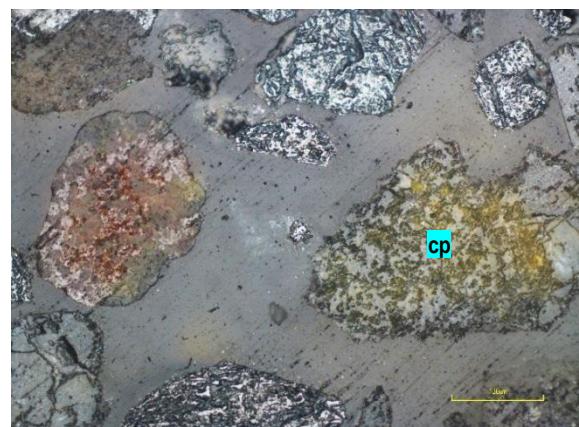

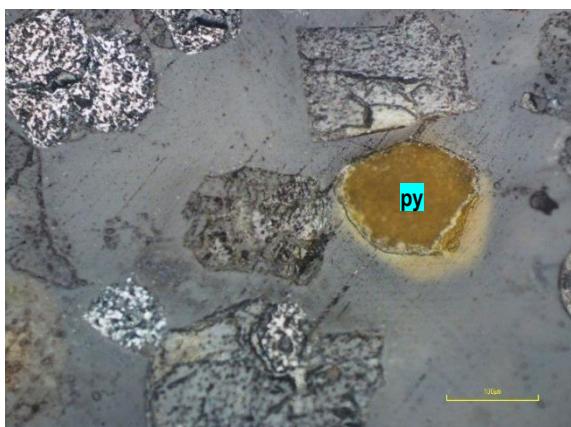

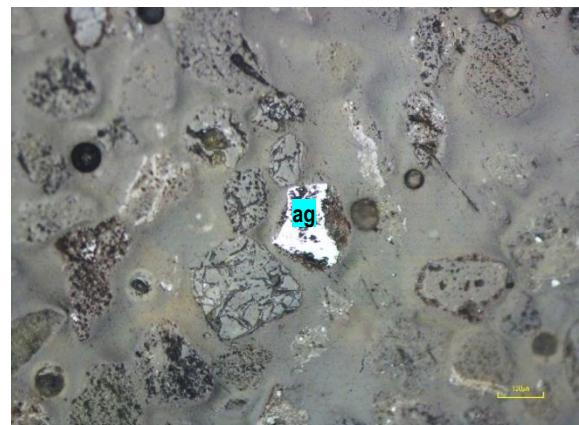

No Sampel : 3
 Koordinat :
 Mineral Bijih : Pyrite, silver, dan sphalerite
 Referensi : Marshall et al. (2004)

| Komposisi Mineral | Simbol | Deskripsi Mineralogi |
|-------------------|--------|--------------------------------------------------------------------------------------------------------------------------------------------|
| Pyrite | py | Warna putih kekuningan, bentuk subhedral-anhedral, terdapat striasi, anisotropik, tidak memiliki pleokroisme, ukuran mineral 0,1 - 0,3 mm. |
| Silver | ag | Warna putih cerah, bentuk subhedral-anhedral, isotropik, tidak memiliki pleokroisme, ukuran mineral <0,3 mm. |
| Sphalerite | sph | Warna abu-abu, bentuk subhedral-anhedral, isotropik, tidak ada pleokroisme, ukuran mineral 125 µm |

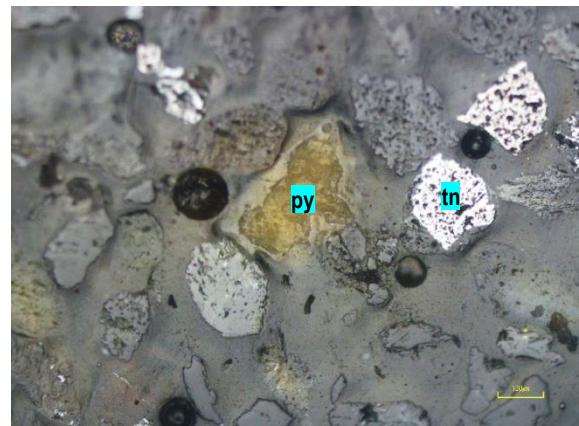

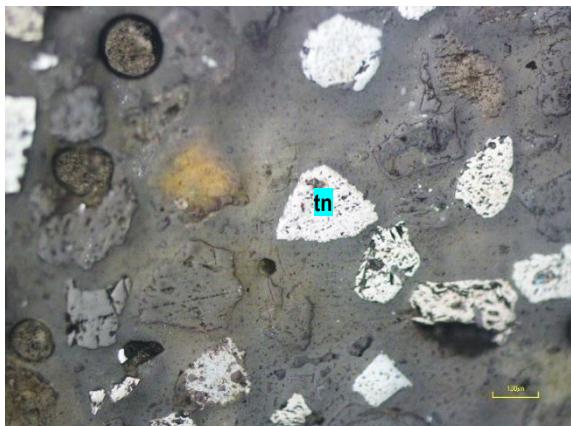

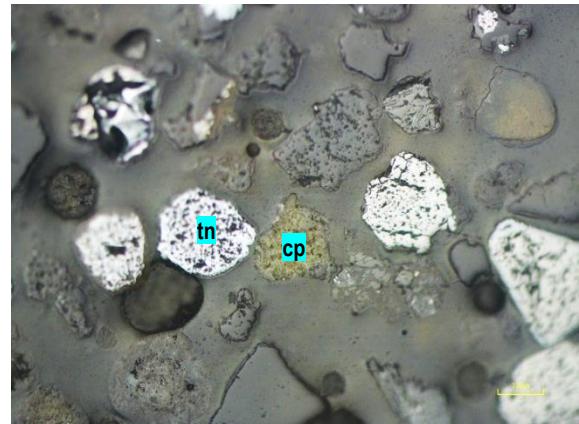

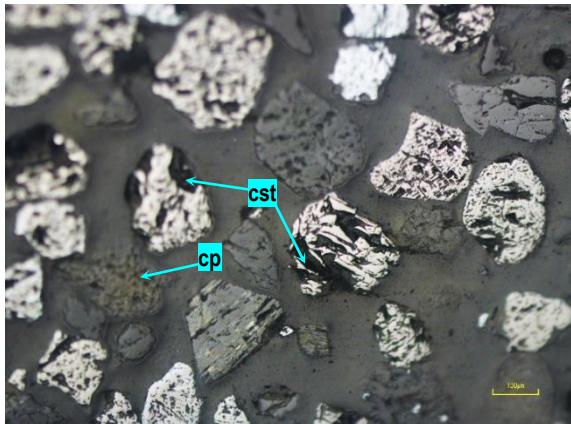

No Sampel : 4
 Koordinat :
 Mineral Bijih : Pyrite, chalcopyrite, silver, dan cassiterite
 Referensi : Marshall et al. (2004)

| Komposisi Mineral | Simbol | Deskripsi Mineralogi |
|-------------------|--------|--------------------------------------------------------------------------------------------------------------------------|
| Pyrite | py | Warna putih kekuningan, bentuk subhedral-anhedral, anisotropik, tidak memiliki pleokroisme, ukuran mineral 0,1 - 0,3 mm. |
| Chalcopyrite | cp | Warna kuning cerah, bentuk anhedral, anisotropik, tidak ada pleokroisme, ukuran mineral 0,05 mm. |
| Silver | ag | Warna putih cerah, bentuk subhedral-anhedral, isotropik, tidak memiliki pleokroisme, ukuran mineral <0,3 mm. |
| Cassiterite | cst | Warna abu-abu kehitaman, bentuk anhedral, anisotropik, tidak memiliki pleokroisme, ukuran mineral 0,1-0,5 mm. |

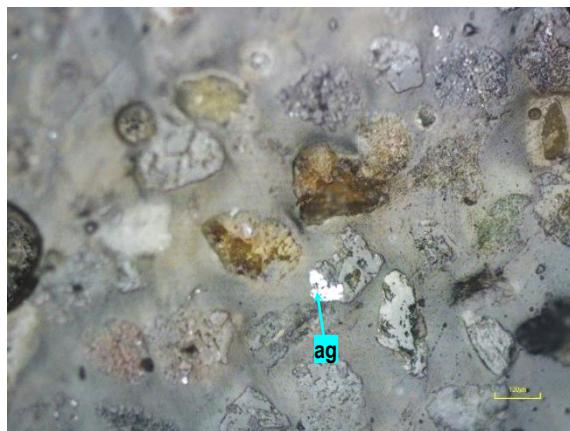

No Sampel : 5
 Koordinat :
 Mineral Bijih : Cassiterite, chalcopyrite, pyrite, dan tennantite
 Referensi : Marshall et al. (2004)

| Komposisi Mineral | Simbol | Deskripsi Mineralogi |
|-------------------|--------|--------------------------------------------------------------------------------------------------------------------------|
| Cassiterite | cst | Warna abu-abu kehitaman, bentuk anhedral, anisotropik, tidak memiliki pleokroisme, ukuran mineral 0,1-0,5 mm. |
| Chalcopyrite | cp | Warna kuning cerah, bentuk anhedral, anisotropik, tidak ada pleokroisme, ukuran mineral 0,05 mm. |
| Pyrite | py | Warna putih kekuningan, bentuk subhedral-anhedral, anisotropik, tidak memiliki pleokroisme, ukuran mineral 0,1 - 0,3 mm. |
| Tennantite | tn | Warna putih keabu-abuan, bentuk subhedral-anhedral, anisotropik, tidak memiliki pleokroisme, ukuran <0,025 mm |

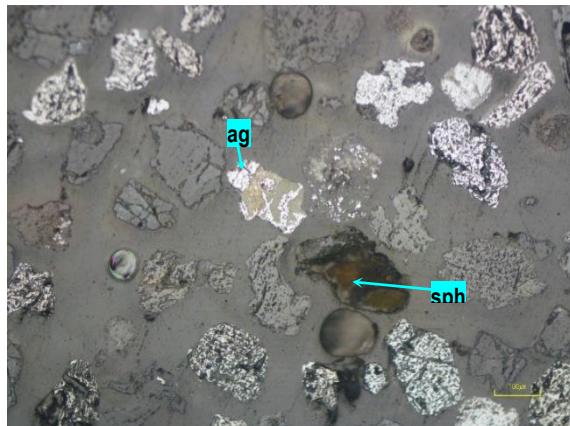

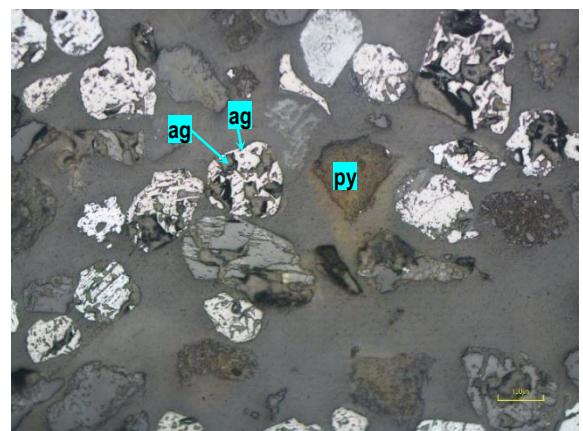

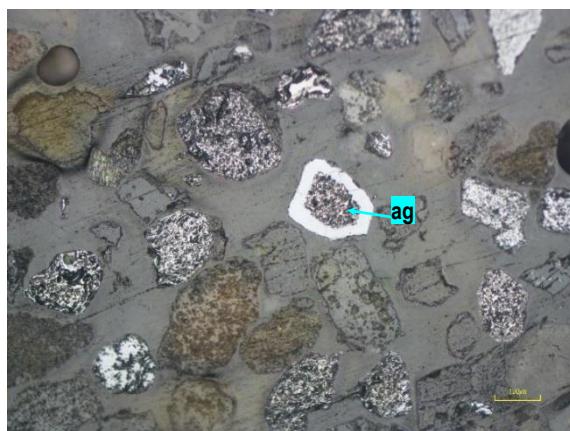

No Sampel : 6
Koordinat :
Mineral Bijih : Silver dan tennantite
Referensi : Marshall et al. (2004)

| Komposisi Mineral | Simbol | Deskripsi Mineralogi |
|-------------------|--------|---------------------------------------------------------------------------------------------------------------|
| Silver | ag | Warna putih cerah, bentuk subhedral-anhedral, isotropik, tidak memiliki pleokroisme, ukuran mineral <0,3 mm. |
| Tennantite | tn | Warna putih keabu-abuan, bentuk subhedral-anhedral, anisotropik, tidak memiliki pleokroisme, ukuran <0,025 mm |

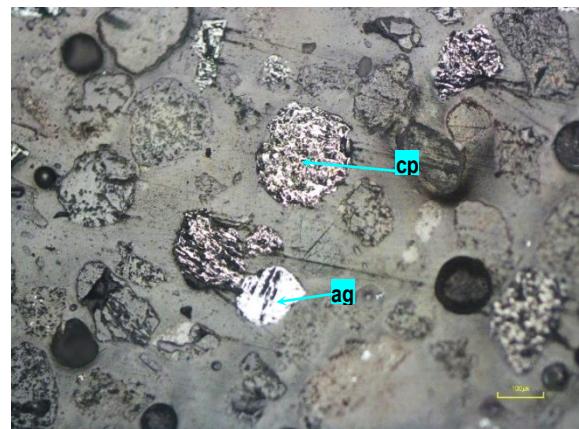

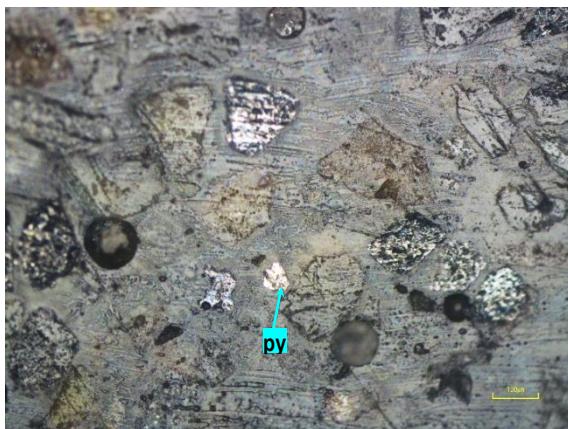

No Sampel : 7
 Koordinat :
 Mineral Bijih : Pyrite, silver, cassiterite, tennantite, dan sphalerite
 Referensi : Marshall et al. (2004)

| Komposisi Mineral | Simbol | Deskripsi Mineralogi |
|-------------------|--------|--------------------------------------------------------------------------------------------------------------------------|
| Pyrite | py | Warna putih kekuningan, bentuk subhedral-anhedral, anisotropik, tidak memiliki pleokroisme, ukuran mineral 0,1 - 0,3 mm. |
| Silver | ag | Warna putih cerah, bentuk subhedral-anhedral, isotropik, tidak memiliki pleokroisme, ukuran mineral <0,3 mm. |
| Cassiterite | cst | Warna abu-abu kehitaman, bentuk anhedral, anisotropik, tidak memiliki pleokroisme, ukuran mineral 0,1-0,5 mm. |
| Tennantite | Tn | Warna putih keabu-abuan, bentuk subhedral-anhedral, anisotropik, tidak memiliki pleokroisme, ukuran <0,025 mm |
| Sphalerite | sph | Warna abu-abu, bentuk subhedral-anhedral, isotropik, tidak ada pleokroisme, ukuran mineral 0,02-0,05 mm. |

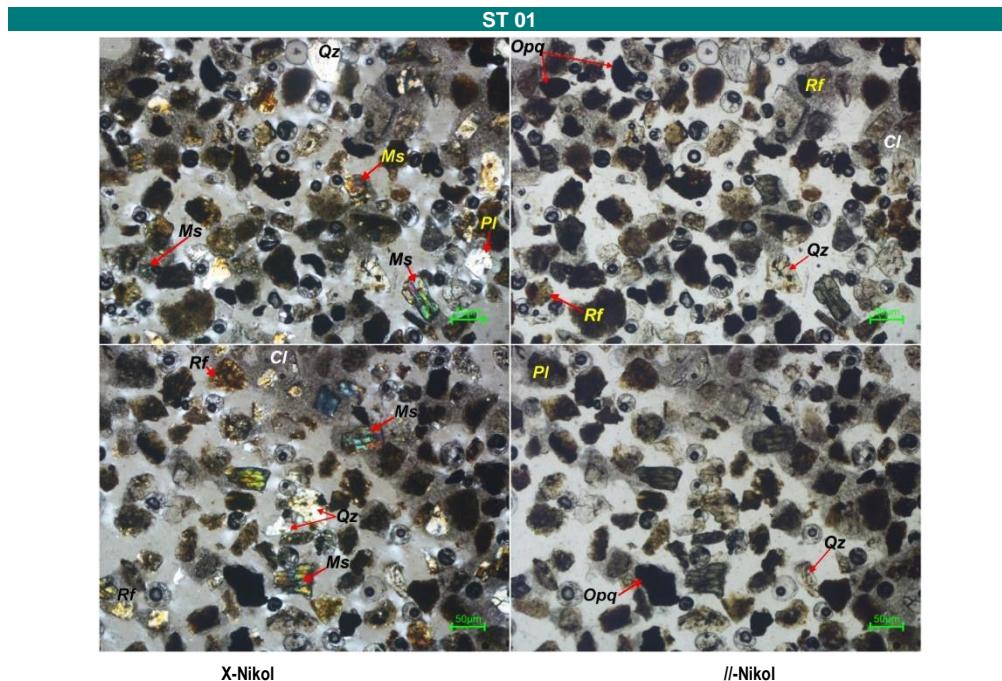

No Sampel : 8
 Koordinat :
 Mineral Bijih : Chalcopyrite, pyrite, gold, silver, dan covellite
 Referensi : Marshall et al. (2004)

| Komposisi Mineral | Simbol | Deskripsi Mineralogi |
|-------------------|--------|--------------------------------------------------------------------------------------------------------------------------|
| Chalcopyrite | cp | Warna kuning cerah, bentuk anhedral, anisotropik, tidak ada pleokroisme, ukuran mineral 0,05 mm. |
| Pyrite | py | Warna putih kekuningan, bentuk subhedral-anhedral, anisotropik, tidak memiliki pleokroisme, ukuran mineral 0,1 - 0,3 mm. |
| Gold | au | Kuning keemasan, bentuk euhedral, isotropik, tidak memiliki pleokroisme, ukuran kristal mineral 0,1-0,3 cm |
| Silver | ag | Warna putih cerah, bentuk subhedral-anhedral, isotropik, tidak memiliki pleokroisme, ukuran mineral <0,3 mm. |
| Covellite | cv | Warna biru, bentuk anhedral, tidak memiliki pleokroisme, ukuran mineral <0.025 mm. |

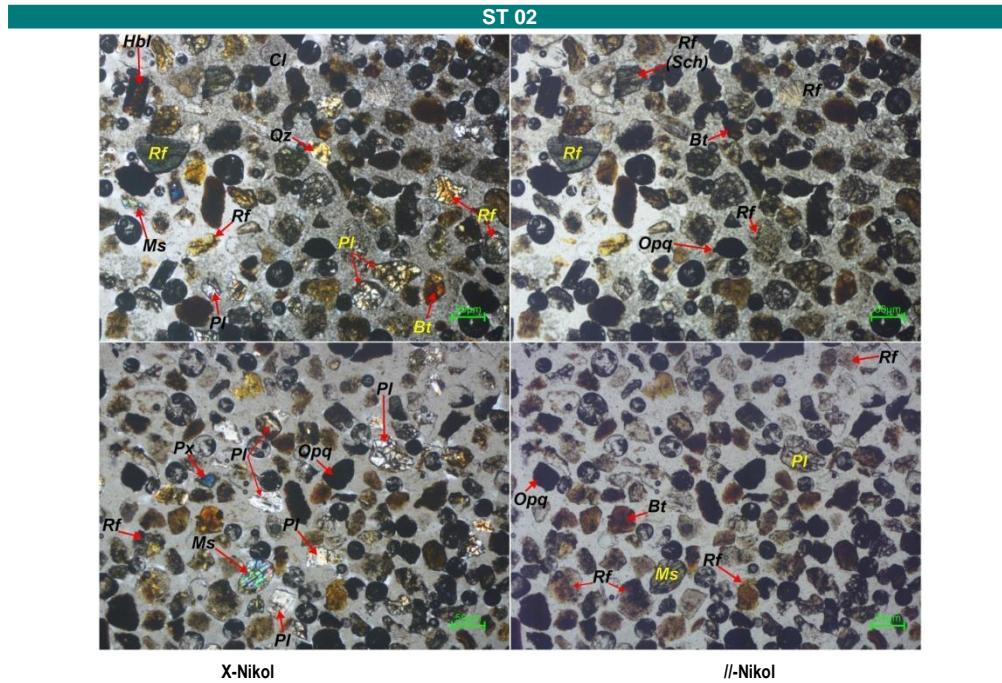

Lampiran 3 Deskripsi Petrografi

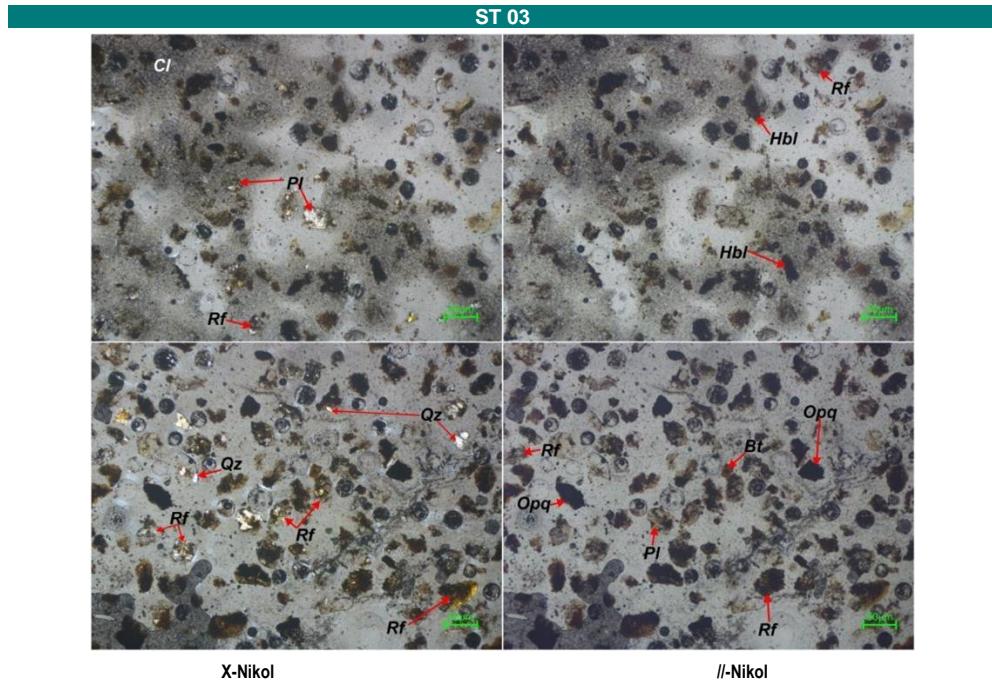

Deskripsi : Kenampakan mikroskopis sayatan pasir menunjukkan warna absorpsi coklat kelabu dengan warna interferensi coklat kehitaman, ukuran material <0.02-0.35 mm dengan bentuk *angular-subrounded*, komposisi material terdiri dari fragmen batuan (batuan beku, batuan sedimen karbonat dan batuan metamorf), mineral Quartz, Plagioclase, muskovit, mineral opak, dan sedikit mineral lempung.

| Komposisi Material | Jumlah(%) | Keterangan |
|--------------------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Quartz | Qz | Warna absorpsi transparan dengan warna interferensi putih, pleokrisme tidak ada (-), intensitas rendah, bentuk sub-anhedral, relief rendah, tidak memiliki belahan, pecahan <i>concoidal</i> , ukuran mineral 0.05-0.17 mm, tidak memiliki kembaran, sudut gelapan 1-3°. |
| Plagioclase | Pl | Warna aborbsi putih kelabu dengan warna interferensi abu-abu kehitaman, pleokrisme tidak ada (-), intensitas sedang, bentuk mineral sub-anhedral, relief sedang, belahan mineral sempurna satu arah, pecahan rata, ukuran mineral 0.08-0.28 mm, memiliki kembaran Kalsbad-Albit, sudut gelapan 34-37°, jenis gelapan miring. |

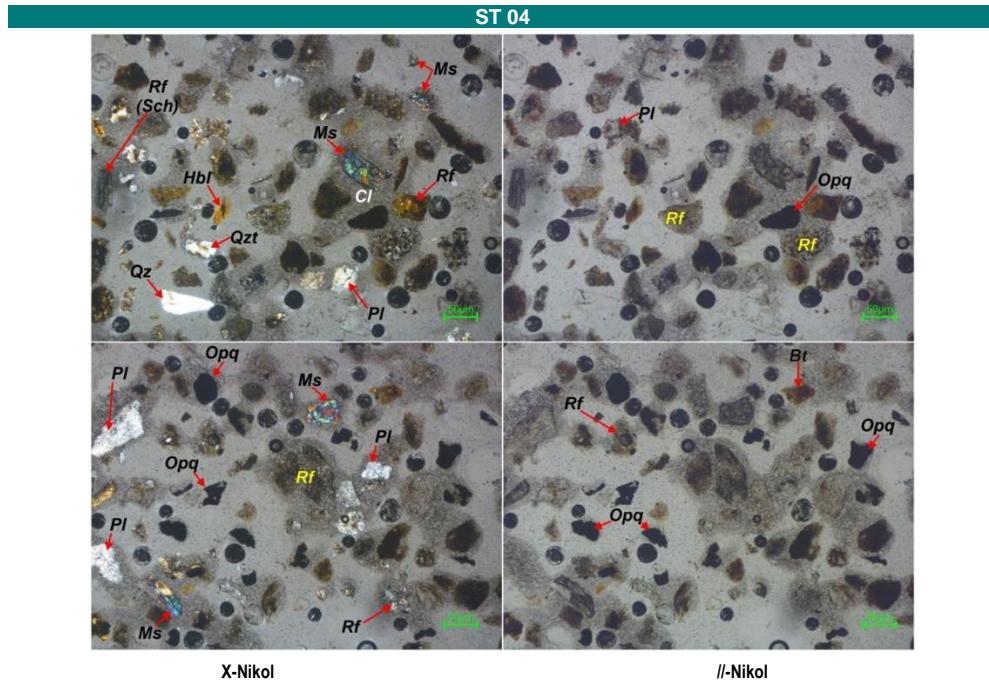

Deskripsi : Kenampakan mikroskopis sayatan pasir menunjukkan warna absorbsi coklat kelabu dengan warna interferensi coklat kehitaman, ukuran material <0.02-0.3 mm dengan bentuk *angular-subrounded*, komposisi material terdiri dari fragmen batuan (batuan beku, batuan sedimen karbonat dan batuan metamorf/sekitis), mineral Quartz, Plagioclase, muskovit, biotit, hornblende, mineral opak, serta dengan sedikit mineral lempur dan piroksen.

| Komposisi Material | Keterangan |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Quartz | Warna absorbsi transparan dengan warna interferensi putih, pleokrisme tidak ada (-), intensitas rendah, bentuk sub-anhedral, relief rendah, tidak memiliki belahan, pecahan <i>concoidal</i> , ukuran mineral 0.03-0.08 mm, tidak memiliki kembaran, sudut gelapan 2°. |
| Piroksen | Warna absorbsi abu-abu dengan warna interferensi biru kehijauan, intensitas tinggi, bentuk sub-anhedral, relief tinggi, belahan sempurna satu arah, pecahan rata, ukuran mineral 0.04-0.08 mm, tidak memiliki kembaran, sudut gelapan 34°, jenis gelapan miring. |
| Plagioclase | Warna absorbsi putih kelabu dengan warna interferensi abu-abu kehitaman, pleokrisme tidak ada (-), intensitas sedang, bentuk mineral sub-anhedral, relief sedang, belahan mineral sempurna satu arah, pecahan rata, ukuran mineral 0.05-0.3 mm, kembaran Kalsbad-Albit, sudut gelapan 30°, jenis gelapan miring, jenis Plagioclase Labradorit |
| Biotit | Warna absorbsi coklat kehitaman dengan warna interferensi coklat kemerahan, pleokrisme dwikroik, intensitas sedang, bentuk sub-anhedral, relief sedang, belahan sempurna satu arah, pecahan rata, ukuran mineral 0.06-0.14 mm, sudut gelapan 90°, jenis gelapan sejajar (parallel). |
| Mineral Opak | Warna absorbsi hitam dengan warna interferensi hitam (isotrop), bentuk sub-anhedral, ukuran mineral 0.07-0.3 mm. |

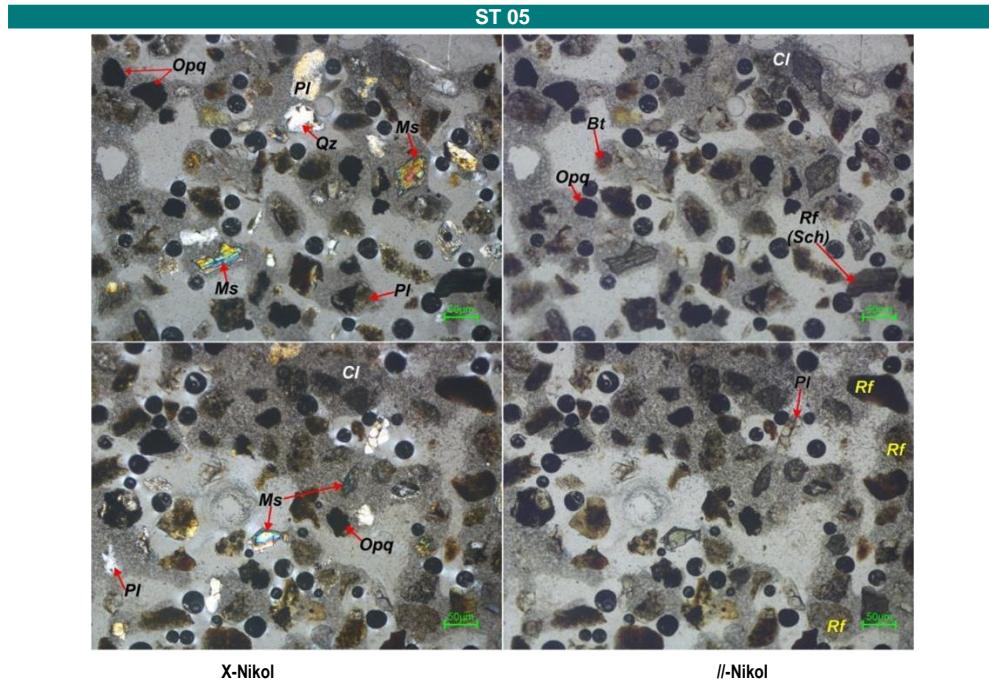

Deskripsi : Kenampakan mikroskopis sayatan pasir menunjukkan warna absorpsi coklat kelabu dengan warna interferensi coklat kehitaman, ukuran material <0.02-0.2 mm dengan bentuk *angular-subrounded*, komposisi material terdiri dari fragmen batuan (batuan beku, batuan sedimen dan batuan metamorf), mineral Quartz, Plagioclase, biotit, hornblende, mineral opak, dan sedikit mineral lempung.

| Komposisi Material | Jumlah (%) | Keterangan |
|--------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Quartz | Qz | Warna absorpsi transparan dengan warna interferensi putih, pleokrisme tidak ada (-), intensitas rendah, bentuk sub-anhedral, relief rendah, tidak memiliki belahan, pecahan <i>concoidal</i> , ukuran mineral 0.02-0.04 mm, tidak memiliki kembaran, sudut gelapan 3°. |
| Plagioclase | Pl | Warna absorpsi kelabu dengan warna interferensi abu-abu kehitaman, pleokrisme tidak ada (-), intensitas sedang, bentuk mineral sub-anhedral, relief sedang, belahan mineral sempurna satu arah, pecahan rata, ukuran mineral <0.12 mm, memiliki kembaran Kalsbad, sudut gelapan 20-25°, jenis gelapan miring. |
| Biotit | Bt | Warna absorpsi coklat kehitaman dengan warna interferensi coklat kemerahan, pleokrisme dwikroik, intensitas sedang, bentuk sub-anhedral, relief sedang, belahan sempurna satu arah, pecahan rata, ukuran mineral 0.02-0.05 mm, sudut gelapan 87-90°. |
| Mineral Opak | Opq | Warna absorpsi hitam dengan warna interferensi hitam (isotrop), bentuk sub-anhedral, ukuran mineral 0.04-0.08 mm. |

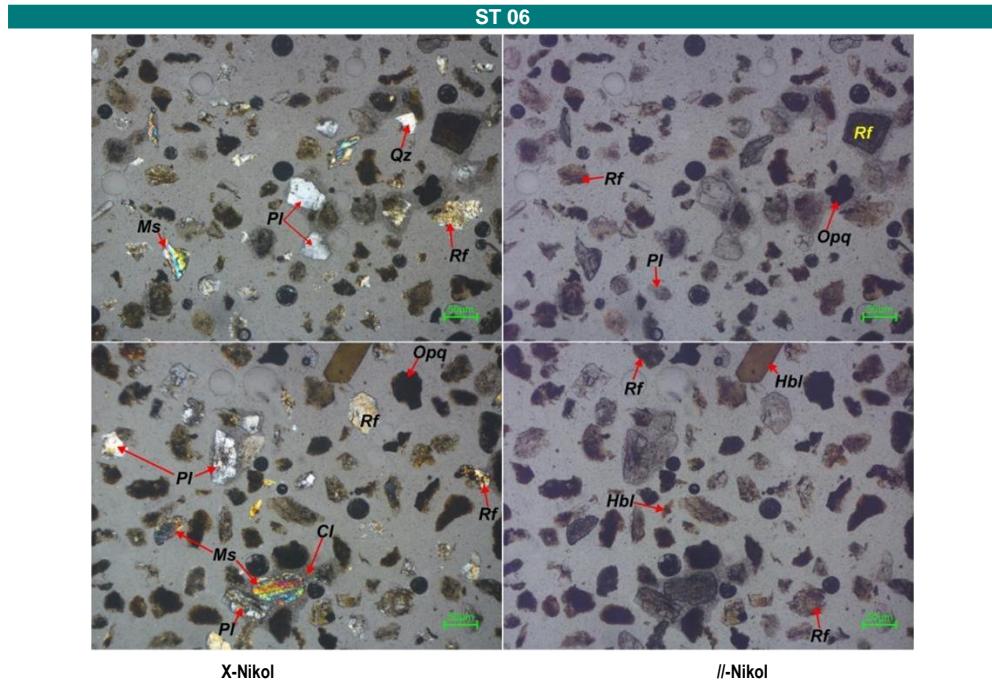

Deskripsi : Kenampakan mikroskopis sayatan pasir menunjukkan warna absorpsi coklat kelabu dengan warna interferensi coklat kehitaman, ukuran material <0.02-0.34 mm dengan bentuk *angular-subrounded*, komposisi material terdiri dari fragmen batuan (batuan beku, batuan sedimen karbonat dan batuan metamorf/sejis), mineral Quartz, Plagioclase, muskovit, biotit, hornblende, mineral opak, dan dengan sedikit mineral lempung.

| Komposisi Material | Keterangan |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Quartz | Warna absorpsi transparan dengan warna interferensi putih, pleokrismetidak ada (-), intensitas rendah, bentuk sub-anhedral, relief rendah, tidakmemiliki belahan, pecahan <i>concoidal</i> , ukuran mineral 0.03-0.07 mm, tidak memiliki kembaran, sudut gelapan 2-4°. |
| Plagioclase | Warna abrorsi putih kelabu dengan warna interferensi abu-abu kehitaman, pleokrisme tidak ada (-), intensitas sedang, bentuk mineral sub-anhedral, relief sedang, belahan mineral sempurna satu arah, pecahan rata, ukuran mineral <0.34 mm, memiliki kembaran Kalsbad-Albit, sudut gelapan 34°, jenis gelapan miring, jenis Plagioclase Labradorit |
| Biotit | Warna absorpsi coklat kehitaman dengan warna interferensi coklat kemerahan, pleokrisme dwikroik, intensitas sedang, bentuk sub-anhedral, relief sedang, belahan sempurna satu arah, pecahan rata, ukuran mineral 0.04-0.065 mm, sudut gelapan 88°. |
| Mineral Opak | Warna absorpsi hitam dengan warna interferensi hitam (isotrop), bentuksub-anhedral, ukuran mineral 0.05-0.12 mm. |

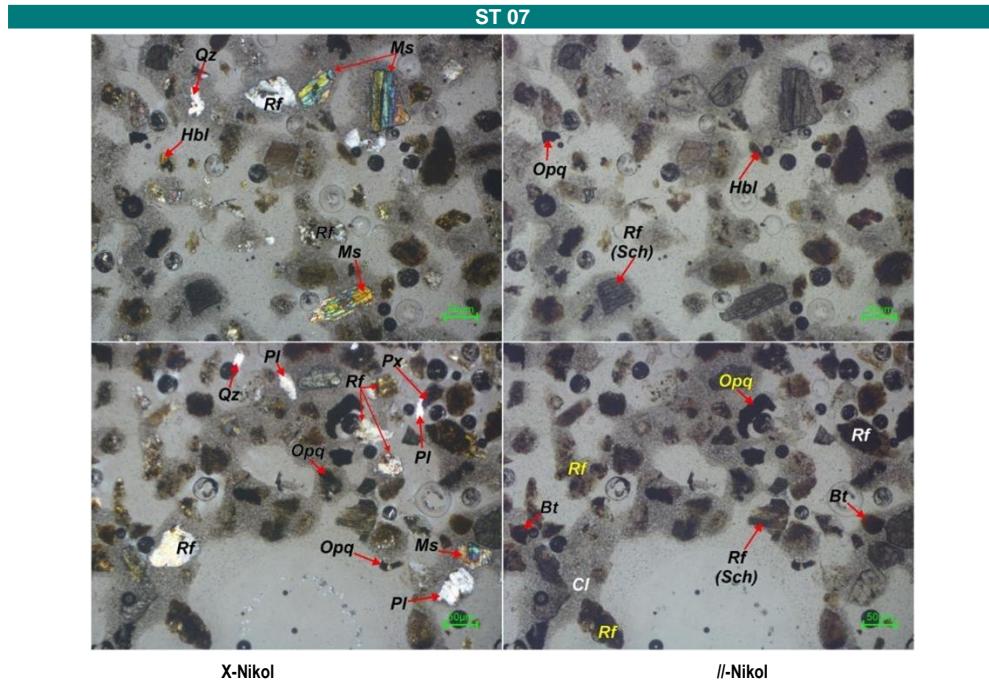

Deskripsi : Kenampakan mikroskopis sayatan pasir menunjukkan warna absorpsi coklat kelabu dengan warna interferensi coklat kehitaman, ukuran material <0.02-0.3 mm dengan bentuk *angular-subrounded*, komposisi material terdiri dari fragmen batuan (batuan beku, batuan sedimen dan batuan metamorf/sekitis), mineral Quartz, Plagioclase, muskovit, biotit, minerallopak, serta dan sedikit mineral lempung.

| Komposisi Material | Jumlah (%) | Keterangan |
|--------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Quartz | Qz | Warna absorpsi transparan dengan warna interferensi putih, pleokrismetidak ada (-), intensitas rendah, bentuk sub-anhedral, relief rendah, tidakmemiliki belahan, pecahan <i>concoidal</i> , ukuran mineral 0.05-0.12 mm, tidak memiliki kembaran, sudut gelapan 4°. |
| Plagioclase | Pl | Warna abrорси kelabu dengan warna interferensi abu-abu kehitaman, pleokrisme tidak ada (-), intensitas sedang, bentuk mineral sub-anhedral, relief sedang, belahan mineral sempurna satu arah, pecahan rata, ukuran mineral <0.3 mm, memiliki kembaran Kalsbad-Albit, sudut gelapan 26-30°, jenis gelapan miring. |
| Biotit | Bt | Warna absorpsi coklat kehitaman dengan warna interferensi coklat kemerahan, pleokrisme dwikroik, intensitas sedang, bentuk sub- anhedral, relief sedang, belahan sempurna satu arah, pecahan rata, ukuran mineral 0.02-0.05 mm, sudut gelapan 89-90°. |

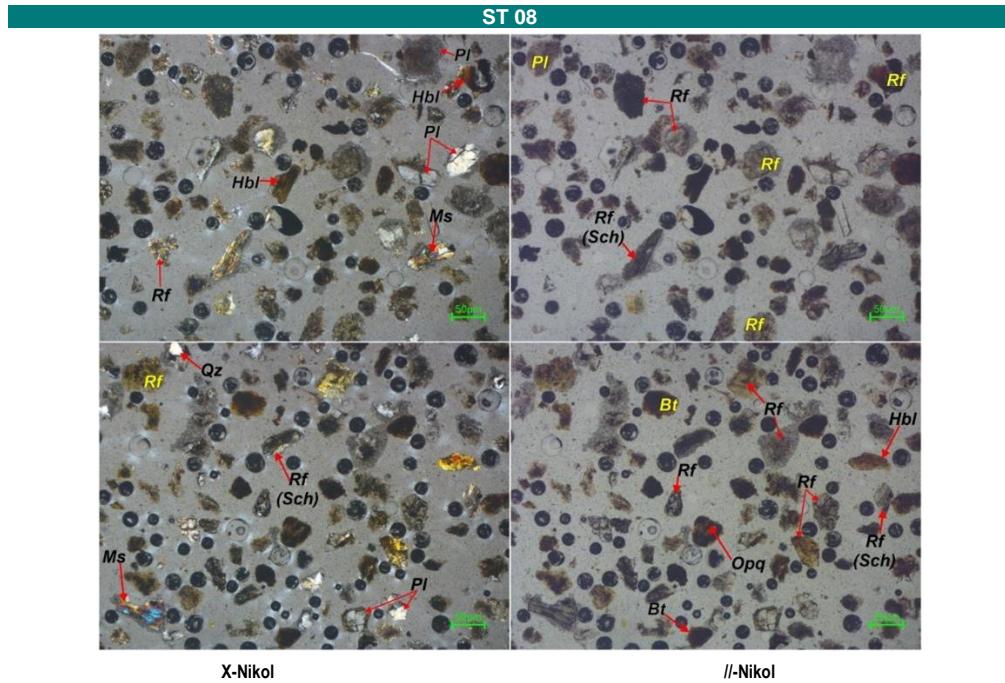

Deskripsi : Kenampakan mikroskopis sayatan pasir menunjukkan warna absorpsi coklat kelabu dengan warna interferensi coklat kemerahan, ukuran material <0.02-0.35 mm dengan bentuk *angular-subrounded*, komposisi material terdiri dari fragmen batuan (batuan beku, batuan sedimen karbonat dan batuan metamorf), mineral Quartz, Plagioclase, muskovit, hornblende, mineral opak, dan sedikit mineral lempung.

| Komposisi Material | Jumlah (%) | Keterangan |
|--------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Quartz | Qz | Warna absorpsi transparan dengan warna interferensi putih, pleokrisme tidak ada (-), intensitas rendah, bentuk sub-anhedral, relief rendah, tidak memiliki belahan, pecahan <i>concoidal</i> , ukuran mineral 0.02-06 mm, tidak memiliki kembaran, sudut gelapan 2°. |
| Plagioclase | Pl | Warna aborsi putih kelabu dengan warna interferensi abu-abu kehitaman, pleokrisme tidak ada (-), intensitas sedang, bentuk mineral sub-anhedral, relief sedang, belahan mineral sempurna satu arah, pecahan rata, ukuran mineral 0.08-0.24 mm, memiliki kembaran Kalsbad-Albit, sudut gelapan 30-34°, jenis gelapan miring, jenis Plagioclase Labradorit |
| Mineral Opak | Opq | Warna absorpsi hitam dengan warna interferensi hitam (isotrop), bentuk sub-anhedral, ukuran mineral 0.04-0.1 mm. |

Deskripsi : Kenampakan mikroskopis sayatan pasir menunjukkan warna absorpsi coklat kelabu dengan warna interferensi coklat kehitaman, ukuran material <0.02-0.32 mm dengan bentuk *angular-subrounded*, komposisi material terdiri dari fragmen batuan (batuan beku, batuan sedimen karbonat dan batuan metamorf/seksis), mineral Quartz, Plagioclase, muskovit, biotit, hornblende, mineral opak, serta dengan sedikit mineral lempung dan piroksen.

| Komposisi Material | Jumlah (%) | Keterangan |
|--------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Quartz | Qz | Warna absorpsi transparan dengan warna interferensi putih, pleokrisme tidak ada (-), intensitas rendah, bentuk sub-anhedral, relief rendah, tidak memiliki belahan, pecahan <i>concoidal</i> , ukuran mineral <0.05 mm, tidak memiliki kembaran, sudut gelapan 3°. |
| Plagioclase | Pi | Warna aborsi putih kelabu dengan warna interferensi abu-abu kehitaman, pleokrisme tidak ada (-), intensitas sedang, bentuk mineral sub-anhedral, relief sedang, belahan mineral sempurna satu arah, pecahan rata, ukuran mineral 0.06-0.24 mm, memiliki kembaran Kalsbad-Albit, sudut gelapan 34-38°, jenis gelapan miring. |
| Piroksen | Px | Warna absorpsi abu-abu dengan warna interferensi biru keunguan-hijau kehitaman, intensitas tinggi, bentuk sub-anhedral, relief tinggi, belahan sempurna satu arah, pecahan rata, ukuran mineral <0.05 mm, tidak memiliki kembaran, sudut gelapan 32-35°, jenis gelapan miring. |
| Biotit | Bt | Warna absorpsi coklat kehitaman dengan warna interferensi coklat kemerahan, pleokrisme dwikroik, intensitas sedang, bentuk sub-anhedral, relief sedang, belahan sempurna satu arah, pecahan rata, ukuran mineral 0.04-0.06 mm, sudut gelapan 87°. |
| Mineral Opak | Opoq | Warna absorpsi hitam dengan warna interferensi hitam (isotrop), bentuk sub-anhedral, ukuran mineral 0.05-0.14 mm. |

Deskripsi : Kenampakan mikroskopis sayatan pasir menunjukkan warna absorpsi coklat kelabu dengan warna interferensi coklat kemerahan, ukuran material <0.02-0.25 mm dengan bentuk *angular-subrounded*, komposisi material terdiri dari fragmen batuan (batuan beku, batuan sedimen karbonat dan batuan metamorf/sekitis), mineral Quartz, Plagioclase,muskovit, biotit, hornblende, mineral opak, dan sedikit mineral lempung.

| Komposisi | Material | Jumlah(%) | Keterangan |
|--------------|----------|-----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Quartz | Qz | | Warna absorpsi transparan dengan warna interferensi putih, pleokrisme tidak ada (-), intensitas rendah, bentuk sub-anhedral, relief rendah,tidak memiliki belahan, pecahan <i>concoidal</i> , ukuran mineral <0.03 mm, tidak memiliki kembaran, sudut gelapan 1-4°. |
| Plagioclase | Pl | | Warna absorpsi putih kelabu dengan warna interferensi abu-abu kehitaman, pleokrisme tidak ada (-), intensitas sedang, bentuk mineral sub-anhedral, relief sedang, belahan mineral sempurna satu arah, pecahan rata, ukuran mineral 0.05-0.18 mm, memiliki kembaran Kalsbad-Albit, sudut gelapan 30-36°, jenis gelapan miring. |
| Biotit | Bt | | Warna absorpsi coklat kekuningan dengan warna interferensi coklat kemerahan, pleokrisme dwikroik, intensitas sedang, bentuk sub- anhedral, relief sedang, belahan sempurna satu arah, pecahan rata, ukuran mineral 0.03-0.07 mm, sudut gelapan 87°. |
| Mineral Opak | Opq | | Warna absorpsi hitam dengan warna interferensi hitam (isotrop), bentuksub-anhedral, ukuran mineral 0.07-0.3 mm. |

Lampiran 5 Curriculum Vitae**A. Data Pribadi**

1. Nama : Angga AL-Amin Husain
2. Tempat, tgl. lahir : Palmerston North, New Zealand, 25 Juli 1995
3. Alamat : Old Camp, Sorowako, Luwu Timur
4. Kewarganegaraan : Warga Negara Indonesia

A. Riwayat Pendidikan

1. Tamat SLTA tahun 2013 di SMAN Model Madani Sulawesi Tengah | IPA
2. Sarjana (S1) tahun 2018 di Universitas Hasanuddin | Teknik Pertambangan
3. Magister (S2) tahun 2022 di Universitas Hasanuddin | Teknik Geologi

B. Pekerjaan dan Riwayat Pekerjaan

- Jenis pekerjaan : Mine Plan Engineer
- Pangkat/Jabatan : Junior Mine Engineer

C. Karya ilmiah yang telah dipublikasikan (misalnya pada jurnal):
