## MCHC

### Case Processing Summary

	N	Valid Percent	Cases		Total	
			N	Missing Percent	N	Percent
Standardized Residual for MCHC	36	100.0%	0	0.0%	36	100.0%

### Descriptives

		Statistic	Std. Error
	Mean	.0000	.13801
Standardized Residual for MCHC	95% Confidence Interval for Mean	Lower Bound	-.2802
	Mean	Upper Bound	.2802
	5% Trimmed Mean		.0372
	Median		.0628
	Variance		.686
	Std. Deviation		.82808
	Minimum		-2.51
	Maximum		1.51
	Range		4.02
	Interquartile Range		.84
	Skewness		-.857
	Kurtosis		.393
			.768

### Tests of Normality

	Kolmogorov-Smirnov <sup>a</sup>			Shapiro-Wilk		
	Statistic	df	Sig.	Statistic	Df	Sig.
Standardized Residual for MCHC	.126	36	.157	.950	36	.106

a. Lilliefors Significance Correction

Pengambilan Keputusan:

- a) Jika signifikan  $> 0,05$  maka data berdistribusi normal
  - b) Jika signifikan  $< 0,05$  maka data berdistribusi tidak normal
- Kesimpulan : Karena nilai sig. dari RBC, HCT, HB, MCV, dan MCHC semuanya  $> 0,05$  maka data berdistribusi normal

### Levene's Test of Equality of Error Variances<sup>a,b</sup>

		Levene Statistic	df1	df2	Sig.
MCHC	Based on Mean	3.429	11	24	.006
	Based on Median	.680	11	24	.743
	Based on Median and with adjusted df	.680	11	6.530	.727
	Based on trimmed mean	3.110	11	24	.010

Tests the null hypothesis that the error variance of the dependent variable is equal across groups.

- a. Dependent variable: MCHC
- b. Design: Intercept + Perlakuan + Waktu + Perlakuan \* Waktu

Pengambilan Keputusan:

- a) Jika signifikan > 0.05 maka data homogen
- b) Jika signifikan < 0,05 maka data tidak homogen

Kesimpulan : Berdasarkan pada hasil yang diperoleh pada test of homogeneity of variances, dimana dihasilkan bahwa nilai probabilitas atau signifikansi dari RBC, HCT, HB, MCV, dan MCHC semuanya lebih besar dari 0.05 maka dapat disimpulkan bahwa varian populasi semua data adalah sama (homogen).
