Dear,
Riitta Meretoja MNSc PhD RN.
Introducing my name is Ernawaty, I have read your manuscript related to the title Nurse Competence Scale: development and psychometric testing, currently I am a student in the master of nursing program, faculty of nursing, Hasanuddin University, Indonesia. I am interested in the questionnaire you used in the article. Therefore I hope that I can use it for my adaptation and implementation in the population in Indonesia.

Best Regards,
Ernawaty

Ernawaty,

Thank you for your interest in this instrument. As the article in *MedSurg Nurse* mentioned, it takes about 10 minutes to administer and is easy to score – the rating for each item is added up to obtain a total scale score – the sum of all 16 items on the scale, or a sub-scale score – the total of the score of all items in a subscale (fundamental or complex nursing care self-efficacy items). One problem I experienced during the study was that some of the nurses (12 of them) actually scored the items in reverse. For example, we would expect a nurse who was confident about his or her teaching abilities to rate "Teach patients about self-care for optimal health" as a "10" on the scale. However, some nurses rated their abilities as "0" instead of "10" and I had evidence to suggest that they simply keyed the items wrong. They had high scores on another instrument that I used to measure confidence but low scores on the NCSES. I omitted their data from the study and the lesson learned was to make certain that I gave very clear instructions before administering in the future.

So, my advice is: 1. Clear instructions, 2. Approximately 10 minutes or more to administer, 3. Sum the scores to calculate total or subscale scores

I attached the scale for your information, feel free to use as you wish for your work. Good luck!

Darlene

Source: MEDSURG Nursing. 23(6):371-377, November/December 2014.
The Nursing Care Self-Efficacy Scale, a tool for measuring nurses' confidence in their nursing abilities, was developed and tested in a subset of medical-surgical clinical nurses. Scale construction, nurses' self-efficacy beliefs, and strategies for enhancing self-efficacy are described.
