| Mikroskopis : | Warna absorpsi abu-abu kecoklatan, warna interferensi abu-abu, granularitas faneritik, kristalinitas holokristalin, relasi <i>equigranular</i> , bentuk mineral euhedral-subhedral, tekstur sekunder <i>Mesh</i> dan <i>Fibrous</i> , dan ukuran mineral 0,05 – 0,5 mm. Komposisi mineral serpentin, spinel, klinopiroksen, dan opaq. | | |
| Deskripsi Mineralogi | | | |
| Komposisi Mineral | Jumlah (%) | Keterangan Optik Mineral | |
| Serpentin (Srp) | 70% | <ul style="list-style-type: none"> - Lizardit (Lz): Warna absorpsi tidak berwarna dan warna interferensi abu-abu. Berbentuk euhedral – subhedral, relief rendah, intensitas sedang, pleokriosme monokroik, memiliki tekstur khusus <i>Mesh</i> dan <i>Fibrous</i>, dan ukuran mineral 0,1 – 0,5 mm - Chrysotile (Ctl): Warna absorpsi tidak berwarna dan warna interferensi abu-abu. Berbentuk subhedral – anhedral, relief rendah, intensitas sedang, pleokriosme monokroik, hadir dalam tekstur vein, dan ukuran mineral 0,25 mm. | |

| | | |
|----------------------------|-----|---|
| Olivin | 15% | Warna absorpsi tidak berwarna, warna interferensi kuning kecoklatan, bentuk subhedral-anhedral, memiliki relief sedang, intensitas sedang, pecahan <i>uneven</i> , pleokrisme monokroik, ukuran mineral 0.02 – 0.1 mm, sudut gelapan 25°, jenis gelapan miring. |
| Spinel (Spl) | 10% | Warna absorpsi hitam kecoklatan dan warna interferensi hitam. Berbentuk subhedral – anhedral, relief sedang, intensitas lemah, dan ukuran mineral 0,05 – 0,1 mm |
| Klinopiroksen (Cpx) | 3% | Warna absorpsi tidak berwarna dan warna interferensi kecoklatan. Berbentuk subhedral-anhedral, relief rendah, intensitas sedang, pleokriosme monokroik, belahan satu arah, sudut gelapan 31°, jenis gelapan miring. Ukuran mineral 0,05 – 0,075 mm |
| Opaq (Opq) | 2% | Warna absorpsi hitam dan warna interferensi hitam. Bentuk anhedral dengan ukuran mineral 0,05 mm |

Nama Batuan : *Serpentinite* (IUGS, 2004)

Tabel penamaan batuan metamorf spesifik (IUGS, 2004)

| Rock Name | Mineralogy | Texture & Notes |
|--------------------------------|--|---|
| <i>Amphibolite</i> | Hbl + Pl ± Qtz ± Bt ± Ms ± Grt | Schistose or granofelsic. If granofelsic, may be impossible to distinguish from diorite. |
| <i>Blueschist</i> | Glc + Ab ± Lws ± Ep | Often schistose, but may be granofelsic. |
| <i>Calc-silicate rock</i> | Variable, but often: Grs, Ep, Di, Vsv, Tlc, Wo, Tr, Cal, Dol (<5% carbonates) | Generally granofelsic, but often layered. |
| <i>Carbonate-silicate rock</i> | Variable, but often: Grs, Ep, Di, Vsv, Tlc, Wo, Tr, Cal, Dol (5–50% carbonates) | Generally granofelsic, but often layered. |
| <i>Cataclasite</i> | Any | A fault rock, schistosity poorly developed or absent, with angular crystals and rock fragments. |
| <i>Ecdolite</i> | Grt + omphacite (Na-cpx) ± Ky ± Rut ± Qtz | May be schistose or granofelsic. |
| <i>Granulite</i> | Variable, with mostly OH-free minerals: Fsp ± Opx ± Cpx ± Crd ± Sil | May be schistose or granofelsic. Very high grade rock. |
| <i>Greenschist</i> | Ab + Chl + Ep + Act ± Qtz | Schistose, generally foliated. Visible minerals are not required, nor is it required to fit the definition of <i>schist</i> below. |
| <i>Greenstone</i> | Ab + Chl + Ep + Act ± Qtz | Granofelsic, generally fine-grained. |
| <i>Hornfels</i> | Variable, and generally too fine-grained to see in hand specimen | Granofelsic on the microscopic scale. Fine-grained, hard, homogeneous, breaking along curved fractures. |
| <i>Marble</i> | Dominated by carbonates (> 50%), but may also have: Qtz, Grs, Ep, Di, Vsv, Tlc, Wo, Tr, others | Usually granofelsic but may be layered, or have foliation defined by stretched carbonate grains or aligned inequant minerals, if present. |
| <i>Migmatite</i> | Typically a combination of mica schist minerals and granitoid minerals. | Separate, irregularly distributed domains of mica schist rock and granitic rock. |
| <i>Mylonite</i> | Any | A sheared rock, with plastically deformed mineral grains defining a foliation |
| <i>Phyllite</i> | Ms (or other white mica) + Chl / Bt ± Fsp ± Qtz | Foliated, with fine-grained matrix coarse enough to provide a "sheen" to the rock. |
| <i>Quartzite</i> | Qtz (> 75%) + Bt + Ms + Grt + Als | Granofelsic unless inequant minerals present. |
| <i>Serpentinite</i> | Srp (>50%) ± Mag/Chr | Often schistose and generally fine grained |
| <i>Skarn (=Tactite)</i> | Variable, but often: Grs, Ep, Di, Vsv, Tlc, Wo, Tr, Cal, Dol | Hydrothermal rock, so generally layered; often coarse with euhedral crystals. |
| <i>Slate</i> | Too fine to discern in hand specimen, but may have pyrite porphyroblasts. | Fine grained to cryptocrystalline, with slate cleavage. Dull surface (<i>cf. phyllite</i>) |
| <i>Soapstone</i> | Tlc ± Srp ± Mag | Generally schistose |

Mineral Abbreviations
A subset of those given in Kretz (1983), with a few additions.

| | | | | |
|-------------------|---------------------|-------------------------|---------------------|-------------------|
| Ab - Albite | Act - Actinolite | Als - Aluminum Silicate | Bt - Biotite | Cal - Calcite |
| Chl - Chlorite | Chr - Chromite | Cpx - Clinopyroxene | Crd - Cordierite | Di - Diopside |
| Dol - Dolomite | Ep - Epidote | Fsp - Feldspar | Glc - Glaucomophane | Grs - Grossular |
| Grt - Garnet | Hbl - Hornblende | Ky - Kyanite | Lws - Lawsonite | Mag - Magnetite |
| Ms - Muscovite | Opx - Orthopyroxene | Pl - Plagioclase | Qtz - Quartz | Rut - Rutile |
| Srp - Serpentine | Sil - Sillimanite | Tlc - Talc | Tr - Tremolite | Vsv - Vesuvianite |
| Wo - Wollastonite | | | | |

US
14°
12°
Hubungan antara utara sebenarnya, utara grid dan utara magnetik ditunjukkan secara diagram untuk pusat bumi ini.
Deklinasi magnetik rata-rata 137 pada tahun 2014 di pusat lembar peti.
Deklinasi tersebut tiap tahun berkurang 2'.
