LAMPIRAN

Lampiran 1 : Penjabaran Rumus GLMMs dan Total Loss

1. Generalized Linear Mixed Models (GLMMs)

Mean *Generalized Linear Mixed Models* (GLMMs),

$$\begin{aligned} E[y_i] &= E[E[y_i|\mathbf{u}]] \\ &= E[\mu_t] \\ &= E[g^{-1}(\mathbf{X}'_t\boldsymbol{\beta} + \mathbf{Z}'_t\mathbf{u})] \end{aligned}$$

karena fungsi g^{-1} nonlinier, misalkan $g(\mu) = \log \mu$ dan $g^{-1}(x) = \exp\{x\}$. Maka,

$$\begin{aligned} E[y_t] &= E[\exp\{\mathbf{X}'_t\boldsymbol{\beta} + \mathbf{Z}'_t\mathbf{u}\}] \\ &= \exp\{\mathbf{X}'_t\boldsymbol{\beta}\} E[\exp\{\mathbf{Z}'_t\mathbf{u}\}] \\ &= \exp\{\mathbf{X}'_t\boldsymbol{\beta}\} M_u(z_i) \end{aligned}$$

dimana $M_u(z_t)$ merupakan fungsi pembangkit momen dari u . Misalkan lebih lanjut $u_t \sim \mathcal{N}(0, \sigma_u^2)$ dan setiap baris Z memiliki entri tunggal yang sama dengan 1 dengan memiliki sisa 0. Maka $M_u(z_i) = \exp\left\{\frac{\sigma_u^2}{2}\right\}$ dan

$$E[y_i] = \exp\{\mathbf{X}'_t\boldsymbol{\beta}\} \exp\left\{\frac{\sigma_u^2}{2}\right\}$$

2. Total Loss

$$M = P(M = 0) = \sum_{m=0}^{\infty} P(M = m)$$

$$S = X_1 + X_2 + \dots + X_M$$

$$X_{jS} = X_1, X_2, \dots, X_M$$

pgf dari S adalah:

$$\begin{aligned} P_S(z) &= E[z^S] \\ &= E[z^0] \Pr(M = m) + \sum_{m=1}^{\infty} E[z^{X_1+X_2+\dots+X_m} | M = n] \Pr(M = m) \end{aligned}$$

$$\begin{aligned}
&= \Pr(M = 0) + \sum_{m=1}^{\infty} E \left[\prod_{j=1}^n z^{X_j} \right] \Pr(M = m) \\
&= \sum_{n=0}^{\infty} \Pr(M = m) [P_X(z)]^m \\
&= E[P_X(z)^M] = P_M[P_X(z)]
\end{aligned}$$

dari persamaan di atas jika ditinjau dari nilai M dan X_j s , maka diperoleh

$$\begin{aligned}
P_S(z) &= P_M[P_X(z)] \\
E(S) &= \mu'_S = \mu'_M \mu'_X = E(M)E(X)
\end{aligned}$$
